Infrasound Avalanche Monitoring System Research Evaluation Maria Vyas, 2009 Little Cottonwood Canyon Road SR 210 has one of the highest risks for avalanche activity for almost any road in North America Until recently UDOT staff members

have generally relied on visual cues to know whether avalanche control operations have successfully triggered slides the same holds true for naturally occurring slides However in poor lighting or blizzard whiteout conditions staff cannot visually monitor whether control operations were successful or if there is still a risk of avalanche In 2006 UDOT installed an Infrasonic Avalanche Detection system to monitor three locations in Little Cottonwood Canyon The Infrasonic provides remote sensing of avalanche activity so that in poor visibility conditions UDOT staff members are aware of whether an avalanche risk remains or not The purpose of this research is to evaluate the performance and value of the Infrasonic and determine whether it increases the reliability of avalanche control operations thereby enhancing public safety **Technical**
