Gizmo Warm-up

Water on Earth is always in motion. These motions form a repeating circuit called the **water cycle**. The Water Cycle Gizmo allows you to explore the different paths water takes as it moves from Earth's surface to the atmosphere and back.

1. Click **Oceans**. What percentage of Earth's water is found in the oceans?

97.25% of the ocean is Earth water.

2. Click **Atmosphere**. How does the Sun cause water to move from the oceans to the atmosphere?

When liquid water is heated by the sun, it evaporates into the atmosphere.

3. Click **Clouds**. How do clouds form?

When saturated air in the atmosphere cools, water vapor condenses into tiny droplets to form clouds.

4. Click **Precip (rain)**. ("Precip" is short for **precipitation**, or water falling to Earth's surface.) What causes it to rain?

When water droplets in clouds grow large enough, they fall as rain.

5. Click **Oceans** again, and then choose the **PATH** tab. Because it has the same beginning and end, the path is a complete cycle. How many steps does this cycle have?

Weld, Johan De Kleer, 2013-09-17 *Readings in Qualitative Reasoning about Physical Systems* describes the automated reasoning about the physical world using qualitative representations. This text is divided into nine chapters, each focusing on some aspect of qualitative physics. The first chapter deals with qualitative physics, which is concerned with representing and reasoning about the physical world. The goal of qualitative physics is to capture both the commonsense knowledge of the person on the street and the tacit knowledge underlying the quantitative knowledge used by engineers and scientists. The succeeding chapter discusses the qualitative calculus and its role in constructing an environment that includes behavior over both mythical time and elapsed time. These topics are followed by reviews of the mathematical aspects of qualitative reasoning, history-based simulation, and temporal reasoning, as well as the intelligence in scientific computing. The final chapters are devoted to automated modeling for qualitative reasoning and causal explanations of behavior. These chapters also examine the qualitative kinematics of reasoning about shape and space. This book will prove useful to psychologists and psychiatrists.
