Metaphors and Analogies in Sciences and Humanities Shyam Wuppuluri,A. C. Grayling,2022-05-30 In this highly interdisciplinary volume we systematically study the role of metaphors and analogies in mis shaping our understanding of the world Metaphors and Analogies occupy a prominent place in scientific discourses as they do in literature humanities and at the very level of our thinking itself But when misused they can lead us astray blinding our understanding inexorably How can metaphors aid us in our understanding of the world What role do they play in our scientific discourses and in humanities How do they help us understand and skillfully deal with our complex socio political scenarios Where is the dividing line between their use and abuse Join us as we explore some of these questions in this volume **Annual Proceedings of Selected Research and Development Presentations at the ... Unruly Complexity Peter J. Taylor,2010-12-15 Ambitiously identifying fresh issues in the study of complex systems Peter J Taylor in a model of interdisciplinary exploration makes these concerns accessible to scholars in the fields of ecology environmental science and science studies Unruly Complexity explores concepts used to deal with complexity in three realms ecology and socio environmental change the collective constitution of knowledge and the interpretations of science as they influence subsequent research For each realm Taylor shows that unruly complexity situations that lack definite boundaries where what goes on outside continually restructures what is inside and where diverse processes come together to produce change should not be suppressed by partitioning complexity into well bounded systems that can be studied or managed from an outside vantage point Using case studies from Australia North America and Africa he encourages readers to be troubled by conventional boundaries especially between science and the interpretation of science and to reflect more self consciously

The Exploitation of Plant Resources in Ancient Africa

Marijke van der Veen, 2013-06-29 This volume presents a completely new and very substantial body of information about the origin of agriculture and plant use in Africa All the evidence is very recent and for the first time all this archaeobotanical evidence is brought together in one volume at present the information is unpublished or published in many disparate journals conference reports monographs site reports etc Early publications concerned with the origins of African plant domestication relied almost exclusively on inferences made from the modern distribution of the wild progenitors of African cultivars there existed virtually no archaeobotanical data at that time Even as recently as the early 1990s direct evidence for the transition to farming and the relative roles of indigenous versus Near Eastern crops was lacking for most of Africa This volume changes that and presents a wide range of exciting new evidence including case studies from Nigeria Burkina Faso Ethiopia Uganda Egypt and Sudan which range in date from 8000 BP to the present day The volume addresses topics such as the role of wild plant resources in hunter gatherer and farming communities the origins of agriculture the agricultural foundation of complex societies long distance trade the exchange of foods and crops and the human impact on local vegetation all key issues of current research in archaeology anthropology agronomy ecology and economic history Ecology & Environment

Protecting Biological Diversity Catherine Potvin,Margaret Kraenzel,Gilles Seutin,2001-09-20 Catherine Potvin Margaret Kraenzel and Gilles Seutin asked scientists from developing countries to summarize their experiences of international collaboration and to suggest attitudes and practices that would lead to more fruitful exchanges with northern scientists They also asked scholars to provide an analytical framework in which these issues could be discussed and to identify possible solutions to questions such as What are the responsibilities of first world scientists involved in conservation actions in developing countries How can biologists work toward the protection of biodiversity while being respectful of the human desire for a better future The resulting papers analyse specific situations encountered in countries such as Democratic Republic of Congo Madagascar India and Panama and discuss the philosophical basis for environmental research They also examine the work of two institutions whose projects in developing countries have been particularly effective through outreach and attention to local values and needs and who propose a pluralistic view of conservation biology ethics Protecting Biological Diversity seeks to encourage students and professionals involved in conservation projects to adopt culturally sensitive attitudes that will lead to greater effectiveness and efficiency in conservation and greater respect for the differences of others Contributors include H Baser Canadian International Development Agency Ottawa P Butler Rare Centre for Tropical Conservation Saint Lucia R Cansari McGill University A K
