Anatomy and Physiology explores the essentials of human structure and function through engaging, generously illustrated, full color activities. Each body system is explored in detail. Homeostasis provides a unifying theme connecting the body systems and highlighting their interrelatedness. Students are encouraged to explore each body system within the contexts of four themes: disease, medicine and technology, aging, and exercise. The result is a rounded exploration of human anatomy and physiology.

BIOZONE's unique, interactive worktext approach encourages direct interaction with the content, allowing students to record their answers within the context of the stimulus material and form a record of work for quick and easy revision.

108 Structure of the Mammalian Heart

Key ideas: Mammals have a four-chambered heart, divided into left and right halves, and acting as a double pump. The heart is the centre of the human circulatory system. It is a hollow, muscular organ made up of four chambers (two atria and two ventricles) that alternately fill and empty of blood, acting as a double pump. The left side pumps the oxygenated blood to the rest of the body, and the right side pumps deoxygenated blood to the lungs.

Human heart structure (anterior view)

Arrows indicate oxygenated blood in the heart and body. Blood enters the heart from the right atrium. Deoxygenated blood enters the right atrium. The right ventricle pumps deoxygenated blood to the lungs. The left atrium receives oxygenated blood from the lungs. The left ventricle pumps oxygenated blood to the rest of the body.

The heart is not a symmetrical organ. Although the majority of blood pumped to each side is the same, the ratio of the two volumes is always 1:1. The ratio of the two volumes is always 1:1. The ratio of the two volumes is always 1:1.

Key idea: Each activity has a key idea summarizing its primary focus. It helps students to understand where the activity's emphasis lies.

Comprehensive, engaging diagrams: Engaging, high quality diagrams provide a visual focus whilst delivering important information in an accessible format.

Content organization: Logically organized content makes it easier for students to access and engage with the information.

Direct questioning: A direct questioning style helps students easily identify what is being asked.

Write-on answers: Students input their answers directly onto the page. This becomes their record of work and helps them when it is time to review for tests and exams.

1. In the schematic diagram of the heart below, label the four chambers and the main vessels entering and leaving them. The arrows indicate the direction of blood flow. Use large coloured circles to mark the position of each of the four valves.
