Photosynthesis, Respiration, and Climate Change Katie M. Becklin,Joy K. Ward,Danielle A. Way,2021-05-31 Changes in atmospheric carbon dioxide concentrations and global climate conditions have altered photosynthesis and plant respiration across both geologic and contemporary time scales Understanding climate change effects on plant carbon dynamics is critical for predicting plant responses to future growing conditions Furthermore demand for biofuel fibre and food production is rapidly increasing with the ever expanding global human population and our ability to meet these demands is exacerbated by climate change This volume integrates physiological ecological and evolutionary perspectives on photosynthesis and respiration responses to climate change We explore this topic in the context of modeling plant responses to climate including physiological mechanisms that constrain carbon assimilation and the potential for plants to acclimate to rising carbon dioxide concentration warming temperatures and drought Additional chapters contrast climate change responses in natural and agricultural ecosystems where differences in climate sensitivity between different photosynthetic pathways can influence community and ecosystem processes Evolutionary studies over past and current time scales provide further insight into evolutionary changes in photosynthetic traits the emergence of novel plant strategies and the potential for rapid evolutionary responses to future climate conditions Finally we discuss novel approaches to engineering photosynthesis and

photorespiration to improve plant productivity for the future The overall goals for this volume are to highlight recent advances in photosynthesis and respiration research and to identify key challenges to understanding and scaling plant physiological responses to climate change The integrated perspectives and broad scope of research make this volume an excellent resource for both students and researchers in many areas of plant science including plant physiology ecology evolution climate change and biotechnology For this volume 37 experts contributed chapters that span modeling empirical and applied research on photosynthesis and respiration responses to climate change Authors represent the following seven countries Australia 6 Canada 9 England 5 Germany 2 Spain 3 and the United States 12 **Deliberation with Chinese**

Characteristics Su Yun Woo,2023-03-10 Woo investigates examples of the Chinese government using methods normally associated with deliberative democracy to involve their citizenry in decision making at a sub national level Despite the tightening of civil society under Xi there are still some opportunities for the Chinese people to articulate their opinions and participate in decision making The proliferation of deliberative democratic practices is motivated by the Communist Party of China's CCP strong governance logic to strengthen regime legitimacy and stability Woo examines deliberative participation through the lens of participatory budgeting in China and investigates its impact on local governance To make sense of this model of deliberative democratic governance in China she unpacks the relationship between deliberative democracy and governance This requires delving into the forms and functions of deliberation with Chinese characteristics especially to show how they depart from the Western deliberative democratic experiences What is the Chinese deliberative discourse in relation to the Western conception of deliberative democracy How can the Chinese deliberative experience contribute to the concept of deliberative governance How does deliberation impact upon local governance in China An intriguing read both for scholars of Chinese politics and for political scientists looking at comparative examples of deliberative governance **AIBE : All**
