The focus of *Language Power* Dynamic Progression from Word to Message is on words and how they convey meaning and feeling. The microscopic focus on the word itself evolves into the logical organization of words into meaningful sentences, paragraphs, and document sections. The focus is on the somewhat divergent nonfiction elements of information and persuasion. From an examination of the principles of information and persuasion, the book evolves into an examination of specific applications of the informative and persuasive principles in business letter writing, the résumé, the cover letter, the business plan, and the grant proposal. *Language Power* gets the serious student of writing away from the glib advice about writing dos and don'ts or templates that can simply be copied. This is a book about the process of thinking that goes into effective informative and persuasive writing. The book teaches the writing process. Although the discussion of process is illustrated with examples, the examples serve not as templates but to help teach the process. The book's rationale is that solid academics will ultimately outperform the mundane. After examining how words convey meaning, words are next examined as collective structures to convey information or persuasion. Finally, language structures are analyzed in specific forms of business writing.

Committee on Resources, 1997 *Processes of Vegetation Change* C.J. Burrows, 2012-12-06

This book is about ideas on the nature and causes of temporal change in the species composition of vegetation. In particular, it examines the diverse processes of interaction of plants with their environment and with one another through which the species composition of vegetation becomes established. The first chapter considers the general nature of vegetation and the ways in which vegetation change is perceived by ecologists. Chapters 2 and 3 provide essential background about the relationships between plants and their abiotic and biotic environment. Anyone who is familiar with the fundamentals of plant ecology may prefer to pass over Chapters 2 and 3, which of necessity cover their subject matter very briefly. Sequences of development of vegetation on new volcanic rocks, sand dunes, and glacial deposits respectively are outlined in Chapters 4, 5, and 6. Chapter 7 is about the patterns of vegetation change which occur in severe habitats around the world, and Chapter 8 discusses wetlands. Chapter 9 discusses the diverse responses of temperate forests to a variety of disturbing influences, and Chapter 10 deals with change in the species-rich forests of the Tropics. Chapter 11 treats in detail the empirical and inferential data on the biological processes occurring during vegetation change sequences. Chapter 12 considers the plant community phenomena which are implicated in the development of theory about vegetation change. The final chapter, Chapter 13, draws the diverse themes together into a unified theoretical structure by which the vegetation change phenomena may be understood. Service
