Grappling with the Multifaceted World of the DNA Damage Response Antonio Porro,2017-01-10 DNA damage is a major threat to genomic integrity and cell survival It can arise both spontaneously and in response to exogenous agents DNA damage can attack most parts of the DNA structure ranging from minor and major chemical modifications to single strand breaks SSBs and gaps to full double strand breaks DSBs If DNA injuries are mis repaired or unrepaired they may ultimately result in mutations or wider scale genome aberrations that threaten cell homeostasis Consequently the cells elicit an elaborate signalling network known as DNA damage response DDR to detect and repair these cytotoxic lesions This Research Topic was aimed at comprehensive investigations of basic and novel mechanisms that underlie the DNA damage response in eukaryotes

Fieldsend,2021-10-22 This book presents the latest trends and developments in multimodal optimization and niching techniques Most existing optimization methods are designed for locating a single global solution However in real world settings many problems are multimodal by nature i e multiple satisfactory solutions exist It may be desirable to locate several such solutions before deciding which one to use Multimodal optimization has been the subject of intense study in the field of population based meta heuristic algorithms e g evolutionary algorithms EAs for the past few decades These multimodal optimization techniques are commonly referred to as niching methods because of the nature inspired niching effect that is induced to the solution population targeting at multiple optima Many niching methods have been developed in the EA community Some classic examples include crowding fitness sharing clearing derating restricted tournament selection speciation etc Nevertheless applying these niching methods to real world multimodal problems often encounters significant challenges To facilitate the advance of niching methods in facing these challenges this

edited book highlights the latest developments in niching methods The included chapters touch on algorithmic improvements and developments representation and visualization issues as well as new research directions such as preference incorporation in decision making and new application areas This edited book is a first of this kind specifically on the topic of niching techniques This book will serve as a valuable reference book both for researchers and practitioners Although chapters are written in a mutually independent way Chapter 1 will help novice readers get an overview of the field It describes the development of the field and its current state and provides a comparative analysis of the IEEE CEC and ACM GECCO niching competitions of recent years followed by a collection of open research questions and possible research directions that may be tackled in the future
