Analytic Trends in Mathematical Physics Houssam Abdul-Rahman, Robert Sims, Amanda Young, 2020-01-06 This volume contains the proceedings of the Arizona School of Analysis and Mathematical Physics held from March 5-9 2018 at the University of Arizona Tucson Arizona. A main goal of this school was to introduce graduate students and postdocs to exciting topics of current research that are both influenced by physical intuition and require the use of cutting edge mathematics. The articles in this volume reflect recent progress and innovative techniques developed within mathematical physics. Two works investigate spectral gaps of quantum spin systems. Specifically, Abdul Rahman, Lemm, Lucia Nachtergaele and Young consider decorated AKLT models and Lemm demonstrates a finite size criterion for D -dimensional models. Bachmann, De Roeck and Fraas summarize a recent proof of the adiabatic theorem while Bachmann, Bols, De Roeck and Fraas discuss linear response for interacting Hall insulators. Models on general graphs are the topic of the articles by Fischbacher on higher spin XXZ and by Latushkin and Sukhtaiev on an index theorem for Schrödinger operators. Probabilistic applications are the focus of the articles by DeMuse and Yin on exponential random graphs, by Saenz on KPZ universality and by Stolz on disordered quantum spin chains. In all the diversity represented here is a testament to the enthusiasm this rich field of mathematical physics generates.

Multicultural Instructional Design: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2019-07-05 As the world becomes more globalized, student populations in educational settings will continue to grow in diversity. To ensure students develop the cultural competence to adapt to new environments, educational institutions must develop curriculum policies and programs to aid in the progression of cultural acceptance and understanding. *Multicultural Instructional Design: Concepts, Methodologies, Tools, and Applications* is a vital reference source for the latest research findings on inclusive curriculum development for multicultural learners. It also examines the interaction between culture and learning in academic environments and the efforts to mediate it through various educational venues. Highlighting a range of topics such as intercultural communication, student diversity, and language skills, this multi-volume book is ideally designed for educators, professionals, school administrators, researchers, and practitioners in the field of education.

Advances in Harmonic Analysis and Partial Differential Equations Donatella Danielli, Irina Mitrea, 2020-04-09 This volume contains the proceedings of the AMS Special Session on Harmonic Analysis and Partial Differential Equations held from April 21-22 2018 at Northeastern University Boston, Massachusetts. The book features a series of recent developments at the interface between harmonic analysis and partial differential equations and is aimed toward the theoretical and applied communities of researchers working in real, complex, and harmonic analysis, partial differential equations, and their applications. The topics covered belong to the general areas of the theory of function spaces, partial differential equations of elliptic, parabolic, and dissipative types, geometric optics, free boundary problems, and ergodic

theory and the emphasis is on a host of new concepts methods and results Breadth in Contemporary Topology David T. Gay, Weiwei Wu, 2019-06-27 This volume contains the proceedings of the 2017 Georgia International Topology Conference held from May 22 June 2 2017 at the University of Georgia Athens Georgia The papers contained in this volume cover topics ranging from symplectic topology to classical knot theory to topology of 3 and 4 dimensional manifolds to geometric group theory Several papers focus on open problems while other papers present new and insightful proofs of classical results Taken as a whole this volume captures the spirit of the conference both in terms of public lectures and informal conversations and presents a sampling of some of the great new ideas generated in topology over the preceding eight years **From the Basic Homotopy Lemma to the Classification of C^* -algebras** Huaxin Lin, 2017-08-11 This book examines some recent developments in the theory of algebras which are algebras of operators on Hilbert spaces An elementary introduction to the technical part of the theory is given via a basic homotopy lemma concerning a pair of almost commuting unitaries The book presents an outline of the background as well as some recent results of the classification of simple amenable algebras otherwise known as the Elliott program This includes some stable uniqueness theorems and a revisiting of Bott maps via stable homotopy Furthermore theory related rotation maps are introduced The book is based on lecture notes from the CBMS lecture sequence at the University of Wyoming in the summer of 2015 **Davenport-Zannier Polynomials and Dessins d'Enfants** Nikolai M. Adrianov, Fedor Pakovich, Alexander K. Zvonkin, 2020-06-29 The French expression dessins d'enfants means children's drawings This term was coined by the great French mathematician Alexandre Grothendieck in order to denominate a method of pictorial representation of some highly interesting classes of polynomials and rational functions The polynomials studied in this book take their origin in number theory The authors show how by drawing simple pictures one can prove some long standing conjectures and formulate new ones The theory presented here touches upon many different fields of mathematics The major part of the book is quite elementary and is easily accessible to an undergraduate student The less elementary parts such as Galois theory or group representations and their characters would need a more profound knowledge of mathematics The reader may either take the basic facts of these theories for granted or use our book as a motivation and a first approach to these subjects Trees of Hyperbolic Spaces Michael Kapovich, Pranab Sardar, 2024-08-15 This book offers an alternative proof of the Bestvina Feighn combination theorem for trees of hyperbolic spaces and describes uniform quasigeodesics in such spaces As one of the applications of their description of uniform quasigeodesics the authors prove the existence of Cannon Thurston maps for inclusion maps of total spaces of subtrees of hyperbolic spaces and of relatively hyperbolic spaces They also analyze the structure of Cannon Thurston laminations in this setting Furthermore some group theoretic applications of these results are discussed This book also contains background material on coarse geometry and geometric group theory Wireless Communications Keith Q. T. Zhang, 2015-12-14 Understand the mechanics of wireless communication Wireless Communications Principles Theory and Methodology offers a

detailed introduction to the technology Comprehensive and well rounded coverage includes signaling transmission and detection including the mathematical and physics principles that underlie the technology s mechanics Problems with modern wireless communication are discussed in the context of applied skills and the various approaches to solving these issues offer students the opportunity to test their understanding in a practical manner With in depth explanations and a practical approach to complex material this book provides students with a clear understanding of wireless communication technology

Igusa's p -Adic Local Zeta Function and the Monodromy Conjecture for Non-Degenerate Surface Singularities Bart Bories, Willem Veys, 2016-06-21 In 2011 Lemahieu and Van Proeyen proved the Monodromy Conjecture for the local topological zeta function of a non degenerate surface singularity The authors start from their work and obtain the same result for Igusa's p -adic and the motivic zeta function In the p -adic case this is for a polynomial $f \in \mathbb{Z}[x, y, z]$ satisfying $f(0, 0, 0) = 0$ and non degenerate with respect to its Newton polyhedron we show that every pole of the local p -adic zeta function of f induces an eigenvalue of the local monodromy of f at some point of $f^{-1}(0) \subset \mathbb{C}^3$ close to the origin Essentially the entire paper is dedicated to proving that for f as above certain candidate poles of Igusa's p -adic zeta function of f arising from so called B_1 facets of the Newton polyhedron of f are actually not poles This turns out to be much harder than in the topological setting The combinatorial proof is preceded by a study of the integral points in three dimensional fundamental parallelepipeds Together with the work of Lemahieu and Van Proeyen this main result leads to the Monodromy Conjecture for the p -adic and motivic zeta function of a non degenerate surface singularity
