

HUMAN ANATOMY AND PHYSIOLOGY

Chapter 12

Sensory Organ

- Sense organs have highly specialised nerve cells, which receive stimuli and convert them into appropriate nerve impulses.
- These nerve impulses are carried to the CNS by afferent or sensory nerve fibres.
- sense organs (eyes, ears, tongue, skin, and nose) contain receptors that relay information through sensory neurons to appropriate places within the nervous system.

Following organs are known as sense organs:

1) **Tongue (Taste Bud of Tongue):** To sense the taste.

2) **Eye:** To sense the light and colour.

3) **Ear:** To sense the sound and vibration and sense of hearing.

4) **Nose:** To sense the smell.

5) **Skin:** To sense the touch, pressure, pain, heat, cold, and other sensations.

Organ of Taste (Tongue)

- Tongue is a muscular organ located in the front of the mouth, which helps in chewing and swallowing of food.
- The surface of tongue is covered with the papillae and taste buds. It is considered as the chief organ for taste perception.
- Papillae are small, fleshy projections on tongue.
- Tongue is covered with many taste buds, which are embedded with the papillae.
- Every papilla of tongue has about 5-10 taste buds. These help in helping in the digestion.
- Papillae are of 4 types: granular, filiform, fungiform and circumvallate. The granular papillae are the smallest and the filiform papillae are the largest.
- The granular papillae are the most numerous and are found on the tongue.
- The filiform papillae are the longest and are found on the tongue.

Anatomy And Physiology Chapter 12 Notes:

Anatomy & Physiology (includes A&P Online course) E-Book Kevin T. Patton, 2018-01-31 Anatomy Physiology includes A P Online course E Book *A Blueprint for the Hard Problem of Consciousness* Paulo J. Negro, 2019-02-11 *A Blueprint for the Hard Problem of Consciousness* addresses the fundamental mechanism that allows physical events to transcend into subjective experiences termed the Hard Problem of Consciousness Consciousness is made available as the abstract product of self referent realization of information by strange loops through the levels of processing of the brain Readers are introduced to the concept of the Hard Problem of Consciousness and related concepts followed by a critical discourse of different theories of consciousness Next the author identifies the fundamental flaw of the Integrated Information Theory IIT and proposes an alternative that avoids the cryptic intelligent design and panpsychism of the IIT This author also demonstrates how something can be created out of nothing without resorting to quantum theory while pointing out neurobiological alternatives to the bottom up approach of quantum theories of consciousness The book then delves into the philosophy of qualia in different physiological knowledge networks spatial temporal and olfactory cortical signals for example to explain an action based model consistent with the generational principles of Predictive Coding which maps prediction and predictive error signals for perceptual representations supporting integrated goal directed behaviors Conscious experiences are considered the outcome of abstractions realized out of map overlays and provided by sustained oscillatory activity The key feature of this blueprint is that it offers a perspective of the Hard Problem of Consciousness from the point of view of the subject the experience of being the subject is predicted to be the realization of inference inversely mapped out of hidden causes of global integrated actions The author explains the consistencies of his blueprint with ideas of the Global Neuronal Workspace and the Adaptive Resonance Theory of consciousness as well as with the empirical evidence supporting the Integrated Information Theory *A Blueprint for the Hard Problem of Consciousness* offers a unique perspective to readers interested in the scientific philosophy and cognitive neuroscience theory in relation to models of the theory of consciousness

Anatomy and Physiology for Veterinary Technicians and Nurses Robin Sturtz, Lori Asprea, 2012-10-09 *Anatomy and Physiology for Veterinary Technicians and Nurses A Clinical Approach* is a comprehensive resource on the anatomy and physiology of dogs and cats with comparisons to horses birds and ruminants Organized by body system with a comparative approach the book follows a unique format by addressing anatomy separately from physiology for clarity and improved comprehension Each anatomy chapter has a corresponding physiology chapter complete with illustrations charts and boxes to promote understanding Written specifically for veterinary technicians and nurses the book applies anatomy and physiology to clinical practice with case examples demonstrating clinical relevance The figures from the book additional questions and answers labeling quizzes teaching PowerPoints and a dissection video are available online at www.wiley.com/go/sturtz This introduction to body system analysis of normal structure and function is a must have resource for students of veterinary

technology and nursing as well as a useful quick review for the busy professional Anthony's Textbook of Anatomy & Physiology - E-Book Kevin T. Patton, Gary A.
