Contemporary Computational Mathematics - A Celebration of the 80th Birthday of Ian Sloan Josef Dick, Frances Y.

Kuo, Henryk Woźniakowski, 2018-05-23 This book is a tribute to Professor Ian Hugh Sloan on the occasion of his 80th birthday. It consists of nearly 60 articles written by international leaders in a diverse range of areas in contemporary computational mathematics. These papers highlight the impact and many achievements of Professor Sloan in his distinguished academic career. The book also presents state of the art knowledge in many computational fields such as quasi Monte Carlo and Monte Carlo methods for multivariate integration, multi level methods, finite element methods, uncertainty quantification, spherical designs and integration on the sphere, approximation and interpolation of multivariate functions, oscillatory integrals and in general in information based complexity and tractability as well as in a range of other topics. The book also tells the life story of the renowned mathematician, family man, colleague and friend who has been an inspiration to many of us. The reader may especially enjoy the story from the perspective of his family: his wife, his daughter and son, as well as grandchildren who share their views of Ian. The clear message of the book is that Ian H Sloan has been a role model in science and life. Pamphlet -

Dept. of the Army United States. Department of the Army, 1951 **Cases on Enhancing P-16 Student Engagement With**

Digital Technologies Gierhart, Aaron R., 2024-12-27 Reimagining how digital technologies are integrated into education is crucial for fostering active and meaningful student engagement. Traditional knowledge centric approaches often overlook the dynamic processes students use to interact with and apply technology in their learning. By focusing on how students actively engage with digital tools to meet academic and developmental goals, educators can create richer, more effective learning experiences. This shift not only enhances academic outcomes but also prepares students with the critical skills needed to navigate and contribute to an increasingly digital world. **Cases on Enhancing P 16 Student Engagement With Digital Technologies** features cases of teaching and learning with digital technologies in P 16 educational settings, focusing specifically on what learners do with technology. It shares cases of teaching in which technologies are leveraged in student centered ways that transform learning and allow students to engage in authentic, meaningful learning experiences. Covering topics such as artificial intelligence, AI, immersive learning experiences and traditional learning, this book is an excellent resource for P 16 educators, leaders, stakeholders, policymakers and more. Geometric Algebra with Applications in Science

and Engineering Eduardo Bayro Corrochano, Garret Sobczyk, 2001-04-20 The goal of this book is to present a unified mathematical treatment of diverse problems in mathematics, physics, computer science and engineering using geometric algebra. Geometric algebra was invented by William Kingdon Clifford in 1878 as a unification and generalization of the works of Grassmann and Hamilton, which came more than a quarter of a century before. Whereas the algebras of Clifford and Grassmann are well known in advanced mathematics and physics, they have never made an impact in elementary textbooks where the vector algebra of Gibbs/Heaviside still predominates. The approach to Clifford algebra adopted in most of the articles here was pioneered in the 1960s by David Hestenes. Later, together with Garret Sobczyk, he developed it into a unified

language for mathematics and physics Sobczyk first learned about the power of geometric algebra in classes in electrodynamics and relativity taught by Hestenes at Arizona State University from 1966 to 1967 He still vividly remembers a feeling of disbelief that the fundamental geometric product of vectors could have been left out of his undergraduate mathematics education Geometric algebra provides a rich general mathematical framework for the development of multilinear algebra projective and affine geometry calculus on a manifold the representation of Lie groups and Lie algebras the use of the horosphere and many other areas This book is addressed to a broad audience of applied mathematicians physicists computer scientists and engineers
