- Water-soluble, nonsteroidal hormones-protein, and peptide hormones- are unable to enter the target cells, so instead, they bind to receptors situated on the target cell's plasma membrane and utilize a second messenger system.

Anatomy of the Endocrine System

Hypothalamus

The hypothalamus, which is part of the nervous system, is also considered as a major endocrine organ because it produces several hormones. It is an important autonomic nervous system and endocrine control center of the brain located inferior to the thalamus.

Mixed functions

Although the function of some hormone-producing glands is purely endocrine, the function of others (pancreas and gonads) is mixed- both endocrine and exocrine.

Perkins, 2014-08-27 This book has been honed into an elegant compendium. This outstanding work should be widely read; it is perhaps the best example of an integrative approach to gerontology. Score 94 4 stars. Doody's Physical Change and Aging has been a well-respected resource for caregivers ever since it was published in 1978. This updated version carries on the tradition of providing valuable information on the aging process and age-related health issues. Former First Lady Mrs. Rosalynn Carter. This sixth edition of a classic multidisciplinary text for students of gerontology continues to offer practical, reader-friendly information about the physical changes and common pathologies associated with the aging process. It places special emphasis on the psychological and social implications of these changes in the lives of older adults. The book is distinguished by its thorough focus on anatomy and physiology and common health problems pertaining to each body system. It emphasizes the positive aspects of aging and demonstrates how the elderly population can gain greater personal control through lifestyle changes and preventive health strategies toward the goal of optimal aging. This sixth edition has been thoroughly updated to present new research findings that differentiate normal aging from actual pathology and includes substantially updated information on diagnosis and treatment. It incorporates new data from healthy older adults demonstrating that the aging process is not necessarily as devastating as earlier research had indicated. The book provides new data and guidelines on risk factors, nutrition, preventive measures, interventions, and commonly prescribed medications and includes expanded treatment of complementary and alternative therapies. Also included is an updated discussion of grief, ethical issues, and funeral options. The book reinforces information with practical applications of aging data. Written for students of gerontology, social work, human services, nursing, medicine, occupational and physical therapy, counseling, and elder law, it presents information that is clearly understandable for those without an extensive background in biology or medicine. Additionally, the book is a useful practitioner's guide and an easily understandable book for family caregivers. **THIS SIXTH EDITION INCLUDES NEW INFORMATION ON:** Diagnosis and treatment, Behaviors and interventions that promote more control over an individual's aging process, Genetic DNA theories, Dementia and Parkinson's disease, Immunotherapy, Lifelong health disparities, Animal-assisted therapy, Prayer and meditation, Pharmacogenetics, Geragogy, self-directed learning, Caregiver health as a public health issue, Natural funerals, biodegradable caskets, burial urns, dying at home. **Magill's Medical Guide** Anne Chang, 2005 Thrombolytic therapy, TPA, Thrombosis, thrombus, Thumb sucking, Thyroid disorders, Thyroid gland, Thyroidectomy, Tics, Toilet training, Tonsillectomy, adenoid removal, Tonsillitis, Tooth extraction, Toothache, Torticollis, Touch, Tourette's syndrome, Toxemia, Toxic shock syndrome, Toxicology, Toxoplasmosis, Tracheostomy, Trachoma, Transfusion, Transient ischemic attacks, TIAs, Transplantation, Tremors, Trichinosis, Trichomoniasis, Tropical medicine, Tubal
