technological research stage Much progress has been made in the development of practical devices encouraging the application of superconductors in areas such as human levitation a high speed levitated bearing large current transforming leads and high frequency devices This technological progress has increased our understanding of the science involved such as flux pinning and dynamics and anomalous long range superconducting interactions At this important stage international cooperation and collaborative projects can effectively sustain aggressive research and development in order to advance superconductivity to the next stages The ISS Symposium is expected to serve as a venue for increasing our knowledge of superconductivity and for exchanging visions for future research and applications through the presentation and discuss of the latest research results These proceedings also aim to summarize annual progress in high T_c superconductivity in all fields
