Dynamic Neural Networks for Motion Control of Redundant Manipulators Mei Liu, Jingkun Yan, Renpeng Huang, 2025-09-30 This book discusses the development and application of dynamic neural networks DNNs for solving complex motion control problems in redundant manipulators Specifically it presents a series of advanced DNNs including noise rejection DNNs fuzzy parameter DNNs and so on which are designed to optimize performance while ensuring robustness and computational efficiency Based on the presented DNNs this book further constructs a series of motion control schemes for redundant manipulators to address some key challenges such as cyclic motion position and orientation tracking and model unknown scenarios Each method is rigorously demonstrated for the convergence and its effectiveness is validated through simulations and physical experiments By integrating computational intelligence with control theory this book provides a comprehensive framework for solving time varying and noise perturbed problems in robotics making it a valuable

resource for researchers and practitioners in the field *Insurance, Climate Change and the Law* Franziska Arnold-Dwyer, 2024-04-03 The insurance industry has found itself at the front line of climate change challenges providing insurance cover in relation to risks associated with climate change As risk carriers insurers pay claims for climate change related losses such as property damage caused by windstorms flooding and wildfires which have been increasing in frequency and severity As major institutional investors insurance companies invest in assets that may be increasingly vulnerable to climate risks Insurance regulators across the globe have therefore started to require insurance companies to identify manage and report on climate change risks that could pose a threat to their financial stability However managing and reporting on the effect of climate risk on an insurer's balance sheet is an inward looking perspective that does not stem climate change It needs to be paired with an outward looking perspective that takes account of the insurance industry's impact on the environment and the insurance industry's capacity to influence what policyholders investee enterprises and other business partners do to address climate change challenges For the insurance industry the key components of positive outward impact are impact underwriting and impact investment This book sets out the current legal and regulatory landscape for impact underwriting and impact investment Whilst the focus of research and regulatory interventions to date has been on inward impact in this book it will be argued that to take positive climate action that supports the Paris Agreement goals and the national and international Net Zero targets the debate should now move on to considering the positive outward impact the insurance industry can make and how we can create a legal environment to facilitate this The book puts forward the case for a new vision of the role of the insurance industry as climate action enablers and makes proposals for insurance products and risk transfer and loss resilience structures that can support policyholders in their transition to a Net Zero economy The audience for this book will include legal practitioners insurance industry professionals financial and insurance regulators policymakers and interested academics Quantification of Sustainability Indicators in the Food Sector

Barrie Johnson, Axel Schippers, 2017-05-19 There is considerable interest in pure and applied studies of extremophilic microorganisms including those acidophiles that are active in low pH environments As elsewhere in microbiology this is a fast developing field and the

proposed special issue of *Frontiers* highlights many of the more recent advances that have been made in this area. Authors from leading scientific groups located in North and South America, Australasia and Europe have contributed to this e-book and the topics covered include advances in molecular, biochemical, biogeochemical and industrial aspects of acidophile microbiology.

Insurability of Emerging Risks Baris Soyer, Özlem Gürses, 2025-01-23. This book brings together leading experts in the fields of insurance and the law of obligations to consider how insurance law is attempting to deal with emerging risks. Emerging risks pose significant challenges for the insurance industry. Apart from difficulties in quantifying such risks, the availability of insurance capacity is often a concern. The book looks at these issues from philosophical, economic and actuarial perspectives. It asks how far existing private law rules can cope with emerging risks and in so far as they cannot, how the law should be developed by courts and lawmakers to deal with the emerging legal issues. The book questions the suitability of the current insurance business models in insuring climate-related risks, autonomous systems, insurance of fines and penalties as well as how mass or systemic risks, e.g. pandemics or cyber risks, can be made insurable through add-on coverages to the conventional insurance policies. It also evaluates governments' roles to encourage insurers to provide cover for such risks and discusses how a balance can be struck between the need to regulate and the insurance markets' dynamics. The book will be of academic interest to anyone working in the field of insurance and also relevant for market participants, policy makers and regulators.
