euro area This paper examines the market impact and transmission channels of this new wave of UMPs using a modified event study framework They are found to have a more prominent impact on inflation expectations and exchange rates compared to the earlier UMP announcements The impact on bank equity however is less significant in part due to narrowing profit margin in a low interest rate environment and the marginal effect on sovereign spread compression has diminished By extracting components of monetary policy shocks from the yield curve we find that the traditional signaling channel of the monetary policy transmission continued to play an important role but the portfolio rebalancing channel became more important in the new phase Spillovers to non euro area EU countries the Czech Republic Denmark Poland and Sweden are transmitted mainly through the portfolio rebalancing channel largely affecting sovereign yields and exchange rates
