

Wave Characteristics and Properties Worksheet - ANSWERS

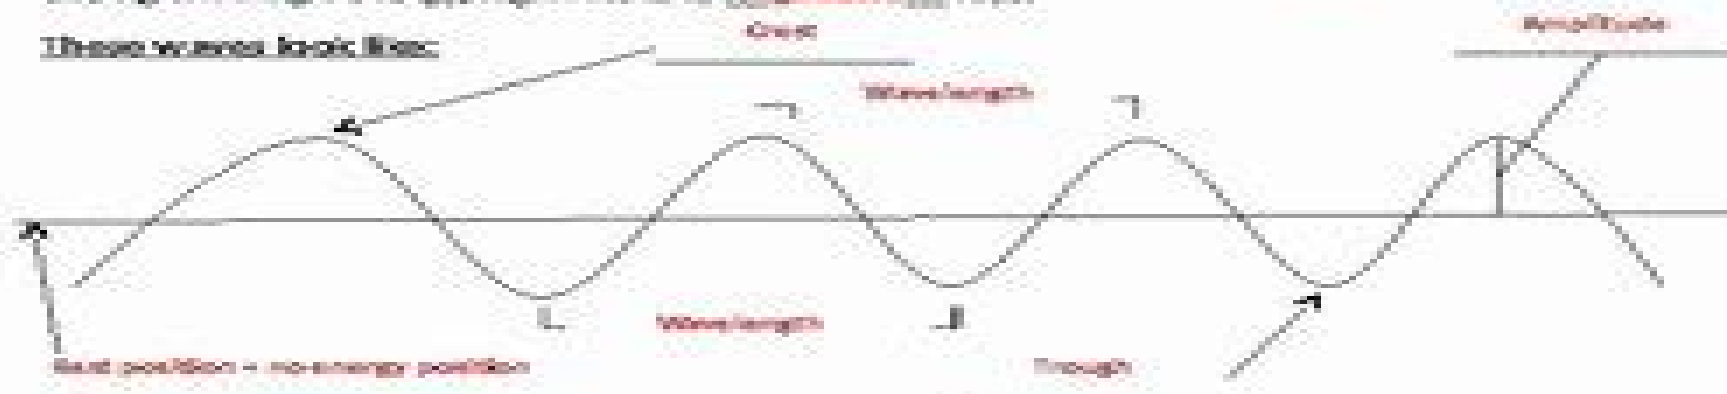

Longitudinal or compression waves are waves which transfer energy from particle to particle. One example is sound waves which travel molecule to molecule, because of this, the wave requires a medium or a source of matter in order to travel. This means sound waves cannot travel through the vacuum of space because there is no matter. Earthquake or seismic waves, sound waves and explosions are all this type of wave.

These waves look like:

Transverse waves are waves which transfer energy in a perpendicular fashion using electricity and magnetism and require no medium or matter in order to travel. Examples of transverse waves are light, radio and ultra-violet waves. Because the waves do not require a medium, this means they can travel in the vacuum of space. The electromagnetic spectrum is made up of a full range or bands of transverse waves beginning with low energy, low intensity radio waves and ending with high energy, high intensity gamma rays.
