Experiment 8.1 – Counter with Register and Register with Data Inputs, Outputs, and Enable

1. Introduction: This circuit is intended as a classroom exercise in which, beyond logic and computer-aided logic, you will be implementing a circuit with logic gates using only the logic blocks shown in the logic blocks. This is a fairly simple circuit made up of a few hundred gates in a single integrated circuit (IC) or a few thousand gates in a few ICs.

2. Objectives: The purpose of Experiment 8.1 is to design a circuit with the following characteristics: a) a 4-bit counter, b) a 4-bit register, c) a 4-bit register with data inputs, outputs, and enable, and d) a 4-bit register with data inputs, outputs, and enable.

3. Introduction:

We will implement a circuit that will generate a sequence of numbers from 0 to 15. The circuit will be implemented using the logic blocks shown in the logic blocks.

4. Requirements: The circuit must have the following requirements: a) a 4-bit counter, b) a 4-bit register, c) a 4-bit register with data inputs, outputs, and enable, and d) a 4-bit register with data inputs, outputs, and enable.

- 1. The circuit must have a 4-bit counter (the counter must be implemented using logic gates).
- 2. The circuit must have a 4-bit register (the register must be implemented using logic gates).
- 3. The circuit must have a 4-bit register with data inputs, outputs, and enable (the register must be implemented using logic gates).

The Dynamics of Digital Excitation Masakazu Shoji, 2012-12-06 The electronic circuit is a proud child of twentieth century natural science In a hundred short years it has developed to the point that it now enhances nearly every aspect of human life Yet our basic understanding of electronic circuit operation electronic circuit theory has not made significant progress during the semiconductor industry's explosive growth from 1950s to the present This is because the electronic circuit has never been considered to be a challenging research subject by physicists Linear passive circuit theory was established by the late 1940s After the advent of the semiconductor electron devices the interest of the technical community shifted away from circuit theory Twenty years later when integrated circuit technology began an explosive growth circuit theory was again left behind in the shadow of rapidly progressing computer aided design CAD technology The present majority view is that electronic circuit theory stands in a subordinate position to CAD and to device processing technology In 1950s and 1960s several new semiconductor devices were invented every year and each new device seemed to have some interesting fundamental physical mechanisms that appeared worth investigating Compared to attractive device physics the problems of the semiconductor device circuit appeared less sophisticated and less attractive Bright minds of the time drifted away from circuit theory to electron device physics After thirty years only one type of semiconductor device the electron triode with several variations survived whereas hundreds of them went into oblivion
