Transforming Curriculum Through Teacher-Learner Partnerships Nair, Pradeep, Keppell, Michael James, Lim, Chee Leong, Mari, Tamil Salvi, Hassan, Nurhanim, 2020-12-11 Empowering learners for life requires a fundamental shift in higher education curriculum design. New priorities, pedagogies, technologies, spaces, and assessment strategies are required to enable learners to take ownership of their learning. Student-centeredness concepts are still prescriptive in nature as most decisions on curriculum, assessment, teaching, and learning approaches are still teacher-centric. Teachers are developing student-centered learning environments without the involvement of the learners in the planning, decision-making, and/or design process. In addition, some lecturers are still practicing the traditional approaches of content delivery and conventional assessment methods rather than experimenting with innovative practices suited for student-centered approaches. Therefore, there is an ongoing need for research focused on the importance and effectiveness of a paradigm shift in education that involves student-teacher partnerships fueled by innovative teaching and learning designs where students take an active role and contribute as partners in learning. *Transforming Curriculum Through Teacher-Learner Partnerships* captures experiences and evidence among teachers in exploring the possibility of active student participation in curriculum design, delivery, and assessment through teacher-learner partnership. The chapters address issues of teacher-learner partnerships in designing the learning environment and how student-centered methods create resilient, adaptable, and future-capable learners. While highlighting topics within this scope such as learner autonomy, learning performance, self-efficacy, and teaching pedagogy, this book is ideally intended for teachers, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students interested in issues related to the teacher-learner partnership.

The Study of Latin

American Intelligence SLATINT During four years top researchers of the region used a standardized set of cognitive measures to assess 4 000 students aged between 14 and 15 years from six countries Brazil Argentina Mexico Chile Colombia and Peru The data collected and now analyzed in this volume is a first step to understand the human cognitive capital of the region a crucial resource for any country today Intelligence research has shown that the cognitive skills of a population are strongly associated with the school performance of its students and the development of a nation This makes Intelligence Measurement and School Performance in Latin America a valuable tool both for Latin American researchers and authorities engaged in the improvement of each country s human resources and for psychologists educators and other social scientists dedicated to the study of the impact of intelligence in the development of nations *What Can PISA 2012 Data Tell Us?* Lei Mee Thien,NORDIN ABD RAZAK,John Keeves,I GUSTI NGURAH DARMAWAN,2016-03-22 This is the first book regarding the issues of PISA that has been published with respect to the Southeast Asian region It is hoped that the content of this book can benefit and provide greater understanding for readers of several important aspects a country performance in PISA 2012 for each participating Southeast Asian country b the need for international comparative studies from the perspective at all levels of the teaching and learning process c equity and quality of education d how PISA impacts on policy making and e the initiatives and future directions and challenges to improve PISA performance in the future cycles of the PISA Studies The major issues raised in this book warrant investigation and reporting to all countries of the World including not only those countries that were engaged in PISA 2012 but also to the approximately 200 countries that are currently in the United Nations Organisation In these regards the readership of this book could be extended to the educators officers from the ministries of education researchers policy makers practising teachers lecturers in universities and teacher training institutions postgraduate students as well as both primary and secondary school principals and teachers **Abstract**

Mathematical Cognition Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts **Disha Combo (3 books) Olympiad Champs Science, Mathematics, English Class 8 with Past 12 Year Questions with Chapter-wise Previous 12 Year**

underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
