

### Surface Weather Map Showing Storm System in the Eastern United States

Figure 2. Simplified surface weather map showing a storm system in the eastern US.

Warm air advection occurs where the wind flows across isotherms from higher pressure (closer to lower latitude) values. Thus, warm air is being transported towards a low-pressure by the horizontal winds. Based on this fact alone, one would expect precipitation at that location to be rising. Cold air advection occurs where the wind flows across the isotherms from lower (colder) values to higher (warmer) values. Thus, colder air being transported by the wind to a warmer location produces falling temperatures.

Based on wind directions and the isotherm pattern on the Figure 2 map, determine the type of air advection (warm or cold) that would be occurring at each station.

3. Winds at station two are occurring at Station \_\_\_\_\_.

- ☐ A  
☐ B  
☐ C  
☐ D

4. Cold air advection was occurring at Station \_\_\_\_\_.

- ☐ B  
☐ C  
☐ D

5. Considering the fact that direction of wind used temperature pressure associated with weather systems, station of Low can be expected to have \_\_\_\_\_ air advection.

- ☐ warm  
☐ cold

6. Meanwhile, station to the west and southwest of Low can be expected to have \_\_\_\_\_ air advection.

- ☐ warm  
☐ cold

7. Areas to the east of High would be expected to have \_\_\_\_\_ air advection.

- ☐ warm  
☐ cold

8. And while you choose here that only the weather based factor would be a High, areas to the west of High would have \_\_\_\_\_ air advection.

- ☐ warm  
☐ cold
