Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

In Fraud We Trust Wes Henricksen, 2024-11-15 Telling lies and falling for them is one of the things that makes us human The vast majority of these falsehoods are harmless and perfectly legal But when someone deceives another for material gain or profit inflicting injury in the process we give this kind of lie a special label fraud Most people are familiar with the concept and understand that fraud is prohibited by law What many fail to appreciate however is that the law does not treat all frauds equally If you defraud an individual you might end up in prison On the other hand if you defraud millions of people what Wes Henricksen calls fraud on the public you might end up wealthy or powerful or even get elected president In a perverse sense the bigger the fraud the more likely it is protected by the First Amendment and therefore legal As a

result many of the largest and most destructive fraud schemes are allowed encouraged and richly rewarded Examples of fraud on the public are everywhere The fossil fuel industry long used PR firms and lobbyists to spread disinformation about oil s role in climate change Sugar companies misled the public about the dangers of high fructose corn syrup redirecting the public s attention to fat Cigarette manufacturers famously lied about the risks of tobacco and opioid makers lied about the effects of the drug Social media influencers and fringe media outlets promoted false claims about the COVID 19 pandemic being a government hoax Others claimed that vaccines were part of a sinister plot Politicians on both sides of the aisle lie with such regularity that people have become deeply cynical about whether to believe anything they say Henricksen shows that large scale fraud is carried out for many reasons beyond financial profit including political gain the prevention of justice and the falsification of history In addition to exposing the depths of the problem Henricksen gives readers a way forward He proposes we call these massive deceit campaigns by their proper name that we de weaponize the First Amendment which was never meant to shield swindlers and that we enact new laws that protect the public from fraud By revealing for the first time the root legal cause of the misinformation crisis and presenting novel solutions In *Fraud We Trust* speaks to the present moment as it offers answers for the future

Principles and Applications of RELAX: A Robust and Universal

Estimator Renbiao Wu, Qiongqiong Jia, Lei Yang, Qing Feng, 2019-03-27 The multiple signal demixing and parameter estimation problems that result from the impacts of background noise and interference are issues that are frequently encountered in the fields of radar sonar communications and navigation Research in the signal processing and control fields has always focused on improving the estimation performance of parameter estimation methods at low SNR and maintaining the robustness of estimations in the presence of model errors This book presents a universal and robust relaxation estimation method RELAX and introduces its basic principles and applications in the fields of classical line spectrum estimation time of delay estimation DOA estimation and radar target imaging This information is explained comprehensively and in great detail and uses metaphors pertaining to romantic relationships to visualize the basic problems of parameter estimation the basic principles of the five types of classical parameter estimation methods and the relationships between these principles The book serves as a reference for scientists and technologists in the fields of signal processing and control while also providing relevant information for graduate students in the related fields

Experiments of the Mind Emily Martin, 2022-01-25 This book is an ethnographic investigation of the everyday professional lives of experimental cognitive psychologists aimed at conveying to readers a sense of the social world of the laboratory and explaining how the field produces knowledge about human cognition Emily Martin did fieldwork in three labs conducting research in normal human cognition In the early days of her fieldwork Martin was struck by how

irrelevant her own subjective experience was to the experimenters What researchers conducting the experiments were seeking was data about how her brain responded to stimuli such as photographs and videos Her own responses to the situation the set up of the experiment etc were very much beside the point This led Martin to wonder when in the history of this field introspection and related messy data concerning the social conditions of lab experimentation came to be expelled Her book examines this history provides a comparison with the history of her own field anthropology and discusses the evolution of a pillar of contemporary experimental cognitive psychology the psychological experiment In the course of this book Martin reports on her discussions with practicing experimental psychologists about the efficacy of placing persons in such unusual settings in the search for general knowledge What emerges is an account of the cognitive psychology experiment as an artificial construction in which a certain kind of knowledge is produced and a certain kind of human subject is created But this book is not a debunking of the discipline of experimental cognitive psychology Martin readily acknowledges the fact that real knowledge is produced in these highly structured and artificial experimental settings She does however question the tendency within this discipline to dismiss the significance of the social and cultural setting of the formal psychological experiment and argues that the field promotes a truncated view of the human subject and its capacities

Modelling Human Motion Nicoletta Noceti, Alessandra Sciutti, Francesco Rea, 2020-07-09 The new frontiers of robotics research foresee future scenarios where artificial agents will leave the laboratory to progressively take part in the activities of our daily life This will require robots to have very sophisticated perceptual and action skills in many intelligence demanding applications with particular reference to the ability to seamlessly interact with humans It will be crucial for the next generation of robots to understand their human partners and at the same time to be intuitively understood by them In this context a deep understanding of human motion is essential for robotics applications where the ability to detect represent and recognize human dynamics and the capability for generating appropriate movements in response sets the scene for higher level tasks This book provides a comprehensive overview of this challenging research field closing the loop between perception and action and between human studies and robotics The book is organized in three main parts The first part focuses on human motion perception with contributions analyzing the neural substrates of human action understanding how perception is influenced by motor control and how it develops over time and is exploited in social contexts The second part considers motion perception from the computational perspective providing perspectives on cutting edge solutions available from the Computer Vision and Machine Learning research fields addressing higher level perceptual tasks Finally the third part takes

into account the implications for robotics with chapters on how motor control is achieved in the latest generation of artificial agents and how such technologies have been exploited to favor human robot interaction This book considers the complete human robot cycle from an examination of how humans perceive motion and act in the world to models for motion perception and control in artificial agents In this respect the book will provide insights into the perception and action loop in humans and machines joining together aspects that are often addressed in independent investigations As a consequence this book positions itself in a field at the intersection of such different disciplines as Robotics Neuroscience Cognitive Science Psychology Computer Vision and Machine Learning By bridging these different research domains the book offers a common reference point for researchers interested in human motion for different applications and from different standpoints spanning Neuroscience Human Motor Control Robotics Human Robot Interaction Computer Vision and Machine Learning Chapter The Importance of the Affective Component of Movement in Action Understanding of this book is available open access under a CC BY 4.0 license at link.springer.com
