Engineering the Plant Factory for the Production of Biologics and Small-Molecule Medicines Domenico De Martinis, Rosella Franconi, Eugenio Benvenuto, Edward P. Rybicki, Kazuhito Fujiyama, 2017-04-27 Plant gene transfer achieved in the early 80s paved the way for the exploitation of the potential of gene engineering to add novel agronomic traits and/or to design plants as factories for high added value molecules. For this latter area of research, the term Molecular Farming was coined in reference to agricultural applications in that major crops like maize and tobacco were originally used basically for pharma applications. The concept of the green biofactory implies different advantages over the typical cell factories based on animal cell or microbial cultures already when considering the investment and managing costs of fermenters. Although yield stability and quality of the molecules may vary among different heterologous systems and plants are competitive on a case to case basis, still the plant factory attracts scientists and technologists for the challenging features of low production cost, product safety and easy scale up. Once engineered, a plant is among the cheapest and easiest eukaryotic system to be bred with simple know how using nutrients, water and light. Molecules that are currently being produced in plants vary from industrial and pharmaceutical proteins including medical diagnostics, proteins and vaccine antigens to nutritional supplements such as vitamins, carbohydrates and biopolymers. Convergence among disciplines as distant as plant physiology and pharmacology and more recently as omic sciences, bioinformatics and nanotechnology increases the options of research on the plant cell factory. Farming for Pharming biologics and small molecule medicines is a

challenging area of plant biotechnology that may break the limits of current standard production technologies The recent success on Ebola fighting with plant made antibodies put a spotlight on the enormous potential of next generation herbal medicines made especially in the name of the guiding principle of reduction of costs hence reduction of disparities of health rights and as a tool to guarantee adequate health protection in developing countries Circularity of Cementitious Materials Christian Paglia,2025-08-18 Recycling of materials in building and infrastructure applications are global concerns driven by natural resource preservation needs of modernized countries and sustainable development of emerging countries This practical book explores the strategies necessary for successful recycling of cement based materials to achieve sustainable and long service life It investigates recycled cementitious materials to ensure decisive implementation and meet industry and societal challenges Presents the state of the art in recycling one of the most used materials in today s construction sector Covers construction and demolition waste and recycled concrete UHPC and road base material Aimed at readers in materials civil and construction engineering this book offers guidance to professionals and researchers developing strategies for sustainable application of cement based materials **Biomedical Aspects of Solid Cancers** Rama Krishna Kancha,2024-04-25 This book offers an overview of the biological basis of 26 different solid cancers for scientists and oncologists to understand the clinical challenges The book provides a quick simplified and updated review of the present genetic or genomic medicine era With genetic and molecular details to enhance understanding of biological mechanisms underlying disease pathogenesis and treatment response each chapter covers epidemiology risk factors classification pathophysiology genetics and treatment of solid cancers This book is a beginner s guide for life sciences and medicine graduate students fellows in training biomedical sciences researchers principal investigators clinician researchers and oncologists **The Routledge Handbook of Architecture and Anthropology** Marie Stender,Claus Bech-Danielsen,Aina Landsverk Hagen,Madlen Kobi,Ying Zhou,2025-11-28 This handbook provides fresh insights into the debates and challenges that unfold in the cross disciplinary field of architecture and anthropology Based on studies of empirical contexts across the globe the authors launch and test a broad variety of methods and advance various theoretical concepts Architecture and anthropology have always had overlapping interests but a range of developments in both areas make it more relevant than ever to intersect overlap combine or even merge the two disciplines In anthropology the spatial material and nonhuman turns have paved the way for an increasing interest in and need for of changing the world rather than just studying it On the other hand architecture beyond designing structures has become interested in the uses and processes that unfold in during and after construction The contemporary research and practices in both disciplines are testimonies that a cross disciplinary exchange is inspiring for engaging with and responding to the challenges of a world in ecological societal and political turmoil This handbook addresses established scholars students and practitioners alike by outlining contemporary developments and tensions at the intersection of architecture and anthropology Neurobehavioral Changes After Acquired
