Transdisciplinary Learning Experience Design Matthew Schmidt, Yvonne Earnshaw, Marisa Exter, Andrew Tawfik, Brad Hokanson, 2024-11-22 This book explores the evolving field of Learning Experience Design LXD. It provides a multifaceted view of LXD incorporating perspectives from instructional design, educational technology and beyond, reflecting the transdisciplinary nature of this design approach. This edited volume responds to the growing recognition of LXD as a distinct area of study and practice within instructional design, especially in the context of rapid technological advancements and changing educational landscapes. The subject of this work is Learning Experience Design, a field integrating multidisciplinary knowledge and techniques to create effective, enjoyable and meaningful learning experiences. The book delves into participatory and co-design, innovative LXD methods, learning-focused usability research and theoretical and conceptual advancements in LXD. It features design cases that provide real-world insights and applications, making the content rich and relatable for researchers and practitioners alike. Readers will find the sections on participatory design, innovative methodologies and the transdisciplinary synergies of particular interest. These areas represent areas of LXD that are in need of further investigation so as to better illuminate how learning experiences can be conceptualized, implemented and evaluated. The edited volume's inclusion of learning-focused usability research offers readers further insights into how learners interact with designed learning experiences, highlighting how insights from such studies can lead to ongoing improvements and foster considerations for future designs. The main benefit readers will derive from this work is a deep, nuanced understanding of current and emerging trends in LXD. Practitioners will gain a wealth of practical strategies and insights to apply in their own work; scholars and students will discover a rich source of theoretical and empirical knowledge to advance both research and practice. The book serves as a catalyst for innovation and cross-disciplinary collaboration, inspiring readers to explore new territories in the learning experience design. This book offers a comprehensive, insightful and forward-looking exploration of the field. It will complement the growing corpus of LXD literature, providing both breadth and depth on this dynamic and influential approach to learning design.

Quantitative Approaches to Universality and Individuality in Language Makoto Yamazaki, Haruko Sanada, Reinhard Köhler, Sheila Embleton, Relja Vulanović, Eric S. Wheeler, 2022-11-07 Quantitative linguistic research reveals fascinating patterns in

contemporary and historical linguistic data The book offers insights from a broad range of languages including Japanese Slovene and Catalan The reader is convinced that statistic empirical analysis and increasingly also machine learning and big data should be an essential part of any serious linguistic enquiry *Artificial Intelligence in Animal Behaviour, Veterinary Behaviour and Neurology* Holger Andreas Volk,Jasmin Nicole Nessler,Anna Zamansky,Sebastian Meller,Annika Bremhorst,2025-08-18 The new leap innovation Artificial Intelligence AI will significantly accelerate the speed of science and translate into clinical practice faster than clinicians ever have been used to Machine and deep learning techniques are now readily available to analyze large and complex data sets providing veterinary scientists with a tool to not only better understand complex behaviour traits and neurological conditions but also to delve into the nuances of animal behaviour itself AI can now write plausible sounding text recognize written or spoken human words recognize objects in images or analyze large amounts of data Different fields of applications are known so far such as improving and speeding up interpretation of radiologic findings interpretation of electroencephalography diagnosis of autism in children objectifying ataxia in dogs detecting pain in cats and assessing and characterizing animal behaviours across species At the time of writing more than 500 AI based algorithms have been approved by the FDA for human medicine most of which are used in radiology and neurology In veterinary neurology and animal behavioural science only a limited amount of research on AI has been done so far Most algorithms presented are merely fragments of usable programs and are not suitable for clinical application Therefore ready to use applications are rare yet essential for implementing AI into everyday routine diagnostic work ups scientific research and animal behavioural assessments The research topic will help to unite current efforts and provide a collection of articles to address some of the current scientific and behavioural gaps In the future a clinician might have a clinical decision support tool that generates accurate estimations of likely outcomes of neurological disease and animal behaviour combining anamnestic behavioural clinical clinical pathology and imaging information We are interested in original research systematic reviews and opinion papers not only about the scope and potential of AI for Veterinary Behavior and Neurology but also about the intersection of AI with the study of animal behaviour ethical considerations and pitfalls that the development of AI generated tools could present Potential themes therefore include but are not limited to AI to recognize monitor diagnose or characterise behaviour neurological deficits or conditions including a detailed analysis of animal behaviour across a variety of contexts and species AI to assess behavioural states in both clinical and natural environments AI to interpret scientific clinical data sets such as clinical pathology omics imaging EEG data and behaviour metrics Ethical and legal considerations when applying or using AI tools in the study of animal behaviour and veterinary medicine Potential of AI to enhance clinical practice in veterinary behavioural medicine veterinary neurology and animal behaviour research Potential of AI enhanced diagnostic and behavioural assessment tools with animals **Acoustic Communication Analysis for Understanding Animal Behavior** Sara Anna Bonini,Susanna Pietropaolo,2022-09-13 **Primate Hearing and**

Communication Rolf M. Quam, Marissa A. Ramsier, Richard R. Fay, Arthur N. Popper, 2017-09-04 Presents a comprehensive review of nonhuman primate audition and vocal communication. These are obviously intimately related topics but are often addressed separately. The hearing abilities of primates have been tested experimentally in a large number of species across the primate order and these studies have revealed both consistent patterns as well as interesting variation within and between taxonomic groups. Recent studies have shed light on how variation in anatomical structures along the auditory pathway relates to variation in auditory sensitivity. At the same time, ongoing studies of vocal communication in wild primate populations continue to reveal new insights into the social and environmental contexts of many primate calls and the range of known primate vocalizations has increased dramatically with the development of more sophisticated and accessible auditory equipment and software that enables the recording and analysis of higher fidelity and broader band recordings including documenting very high frequency i.e. ultrasound vocalizations. Historically, the relative importance of primate calls has been evaluated qualitatively by the perception of the researcher but new methods and approaches now enable a greater appreciation for how signals are used and perceived by the primates in question. The integration of anatomical and behavioral data on acoustic communication and the environmental correlates thereof has significant potential for reconstructing behavior in the fossil record. This confluence of factors and accumulating evidence for the sophistication and complexity in both the signal and its interpretation indicate that a book synthesizing this information across primates is warranted and represents an important contribution to the literature. Language, Syntax, and the Natural Sciences Ángel J. Gallego, Roger Martin, 2018-10-18 An exploration of human language from the perspective of the natural sciences. This outstanding book brings together leading specialists to discuss the scientific connection of language to disciplines such as mathematics, physics, chemistry, and biology. *Rodent Bioacoustics* Micheal L. Dent, Richard R. Fay, Arthur N. Popper, 2018-08-28 By far the most widely used subjects in psychological and biological research today are rodents. Although rats and mice comprise the largest group of animals used in research, there are over 2,000 species and 27 families of rodents living all over the world except Antarctica and thriving in many different habitat types. The vast environmental diversity that rodents face has led to numerous adaptations for communication including vocalizing and hearing in both the sonic and ultrasonic ranges, effectively communicating in the open air and underground and using vocalizations for coordinating sexual behavior, for mother-pup interactions, and for signaling an alarming situation to the group. Some rodent species have even developed foot drumming behaviors for communication. Comparative studies from around the globe using both field and laboratory methodologies reveal the vast differences in acoustic communication behavior across many rodent species. Some rodents are amenable to training and have been domesticated and bred purely for research purposes. Since the early 1900s, rats and mice have been indispensable to research programs around the world. Thus, much of what we know about hearing and vocalizations in rodents comes from these two species tested in the laboratory. The sequencing of the mouse genome in 2002 followed by the rat

genome in 2004 only increased the utility of these animals as research subjects since genetically engineered strains mimicking human diseases and disorders could be developed more easily In the laboratory rats and mice are used as models for human communication and hearing disorders and are involved in studies on hearing loss and prevention hormones and auditory plasticity to name a few We know that certain strains of mice retain hearing better than others throughout their lifespan and about the genes involved in those differences We know about the effects of noise hormones sex aging and circadian rhythms on hearing in mice and other rodents We also know about normal hearing in many families of rodents including the perception of simple and complex stimuli and the anatomy and physiology of hearing and sound localization The importance of acoustic communication to these animals as well as the significance of these mammals to biomedical research are summarized in the chapters
