Handbook of Research on Teacher Practices for Diverse Writing Instruction Hodges, Tracey S., 2022-05-20 The art and practice of writing is complex and multidimensional students often apply unique writing styles As such educators must apply focused teaching methods to nurture these unique forms of writing Educators must stay up to date with the practices for diverse writing instruction in order to best engage with a diverse classroom However resources related to writing typically do not focus on the depth and breadth of writing and there is a need for a resource that offers a comprehensive look at diverse writing instruction research The Handbook of Research on Teacher Practices for Diverse Writing Instruction provides a rich discussion of the issues perspectives and methods for writing instruction currently in use with an added lens focusing on diversity and equity It provides unique coverage on the topic of writing instruction for practical implementation within the classroom setting Covering topics such as student motivation curriculum development and content area instruction this major reference work is an essential resource for preservice teachers faculty and administration of K 12 and higher education academic libraries government officials school boards researchers and academicians Biometric Recognition Jinfeng Yang, Jucheng Yang, Zhenan Sun, Shiguang Shan, Weishi Zheng, Jianjiang Feng, 2015-10-23 This book constitutes the refereed proceedings of the 10th Chinese Conference on Biometric Recognition CCBR 2015 held in Tianjin China in November 2015 The 85 revised full papers presented were carefully reviewed and selected from among 120 submissions The papers focus on face fingerprint and palmprint vein biometrics iris and ocular biometrics behavioral biometrics application and system of biometrics multi biometrics and information fusion other biometric recognition and processing **High-Level Adaptation and Aftereffects** Rocco Palumbo, Stefania D'Ascenzo, Luca Tommasi, 2017-04-28 Aftereffects generally occur after a prolonged exposure adaptation to a first stimulus possessing one given property followed by presentation of a stimulus bearing a neutral value of that property The aftereffect consists in a change in appearance of the neutral stimulus following the adapter compared to the appearance of the neutral stimulus when it is perceived without any previous exposure to the adapter The transient phenomena of perceptual aftereffects are believed to depend on the activation of neuron populations that respond selectively to a given property of the stimuli Studying how adaptation occurs which stimulus properties are sensitive to it which timings are necessary whether individual differences modulate its occurrence has thus become an indirect way to probe the plasticity of sensory functions in the nervous system recently extending to more cognitive and representational aspects of neural coding In the last two decades indeed it has been demonstrated that aftereffects occur not only for low level properties of stimuli such as motion color or orientation but also for high level properties Many studies have proven that high level properties of the stimuli e g gender identity ethnicity or age of a face or a voice are sensitive to this phenomenon It has been shown for example that the prolonged exposure to a female or male face produces a gender misperception in the opposite direction when an androgynous face is shown after the adapter

Furthermore recent studies have also shown that aftereffects are not strictly contingent upon the physical features that make up stimuli but they seem to run across the high level proprieties subjects are adapted to These evidences are supported by cross category adaptation studies which underlie how aftereffects occur even across stimuli that do not share physical features e g bodies and faces but that instead share common higher level properties such as gender Given the growing body of research focused on adaptation and aftereffects in high level perception at the boundaries with perceptual learning attention and cognition the purpose of this topic is to provide a picture of the state of the art relative to the specific phenomena of adaptation in high level perceptual processing

A Transitional Imaginary Susan Ballard, Tracey Benson, Robert Carter, Tim Corballis, Zita Joyce, Helen Moore, Julian Priest, Vicki Smith, 2015-11-30 In November 2015 ADA brought together eight artists and writers in post quake Otautahi Christchurch for a book sprint the collaborative writing of a book over the course of five days The result *A Transitional Imaginary* juxtaposes and interweaves its authors perspectives on the effects of the devastating series of earthquakes that began in 2010 Guided by the notion of the digital in its broadest sense this book offers a multiple view of the transitional city attuned to the technologies networks and virtualities that have always ordered our world

Neural Mechanisms of Perceptual Categorization as Precursors to Speech Perception Einat Liebenthal, Lynne E. Bernstein, 2017-05-03 Perceptual categorization is fundamental to the brain s remarkable ability to process large amounts of sensory information and efficiently recognize objects including speech Perceptual categorization is the neural bridge between lower level sensory and higher level language processing A long line of research on the physical properties of the speech signal as determined by the anatomy and physiology of the speech production apparatus has led to descriptions of the acoustic information that is used in speech recognition e g stop consonants place and manner of articulation voice onset time aspiration Recent research has also considered what visual cues are relevant to visual speech recognition i e the visual counter parts used in lipreading or audiovisual speech perception Much of the theoretical work on speech perception was done in the twentieth century without the benefit of neuroimaging technologies and models of neural representation Recent progress in understanding the functional organization of sensory and association cortices based on advances in neuroimaging presents the possibility of

achieving a comprehensive and far reaching account of perception in the service of language At the level of cell assemblies research in animals and humans suggests that neurons in the temporal cortex are important for encoding biological categories On the cellular level different classes of neurons interneurons and pyramidal neurons have been suggested to play differential roles in the neural computations underlying auditory and visual categorization The moment is ripe for a research topic focused on neural mechanisms mediating the emergence of speech representations including auditory visual and even somatosensory based forms Important progress can be achieved by juxtaposing within the same research topic the knowledge that currently exists the identified lacunae and the theories that can support future investigations This research topic provides a snapshot and platform for discussion of current understanding of neural mechanisms underlying the formation of perceptual categories and their relationship to language from a multidisciplinary and multisensory perspective It includes contributions reviews original research methodological developments pertaining to the neural substrates dynamics and mechanisms underlying perceptual categorization and their interaction with neural processes governing speech perception
