Computational Intelligence-based Time Series Analysis Dinesh C. S. Bisht,Mangey Ram,2022-11-30 The sequential analysis of data and information gathered from past to present is called time series analysis Time series data are of high dimension large size and updated continuously A time series depends on various factors like trend seasonality cycle and irregular data set and is basically a series of data points well organized in time Time series forecasting is a significant area of machine learning There are various prediction problems that are time dependent and these problems can be handled through time series analysis Computational intelligence CI is a developing computing approach for the forthcoming several years CI gives the liveness to model the problem according to given requirements It helps to find swift solutions to the problems arising in numerous disciplines These methods mimic human behavior The main objective of CI is to develop intelligent machines to provide solutions to real world problems which are not modelled or are

too difficult to model mathematically This book aims to cover the recent advances in time series and applications of CI for time series analysis Machine Intelligence Pethuru Raj,P Beulah Soundarabai,Peter Augustine,2023-10-03 Machines are being systematically empowered to be interactive and intelligent in their operations offerings and outputs There are pioneering Artificial Intelligence AI technologies and tools Machine and Deep Learning ML DL algorithms along with their enabling frameworks libraries and specialized accelerators find particularly useful applications in computer and machine vision human machine interfaces HMI and intelligent machines Machines that can see and perceive can bring forth deeper and decisive acceleration automation and augmentation capabilities to businesses as well as people in their everyday assignments Machine vision is becoming a reality because of advancements in the computer vision and device instrumentation spaces Machines are increasingly software defined That is vision enabling software and hardware modules are being embedded in new generation machines to be self surroundings and situation aware Machine Intelligence Computer Vision and Natural Language Processing emphasizes computer vision and natural language processing as drivers of advances in machine intelligence The book examines these technologies from the algorithmic level to the applications level It also examines the integrative technologies enabling intelligent applications in business and industry Features Motion images object detection over voice using deep learning algorithms Ubiquitous computing and augmented reality in HCI Learning and reasoning in Artificial Intelligence Economic sustainability mindfulness and diversity in the age of artificial intelligence and machine learning Streaming analytics for healthcare and retail domains Covering established and emerging technologies in machine vision the book focuses on recent and novel applications and discusses state of the art technologies and tools
