Karl Pearson Theodore M. Porter, 2010-01-02 Karl Pearson founder of modern statistics came to this field by way of passionate early studies of philosophy and cultural history as well as ether physics and graphical geometry His faith in science grew out of a deeply moral quest reflected also in his socialism and his efforts to find a new basis for relations between men and women This biography recounts Pearson's extraordinary intellectual adventure and sheds new light on the inner life of science Theodore Porter's intensely personal portrait of Pearson extends from religious crisis and sexual tensions to metaphysical and even mathematical anxieties Pearson sought to reconcile reason with enthusiasm and to achieve the impersonal perspective of science without sacrificing complex individuality Even as he longed to experience nature directly and intimately he identified science with renunciation and positivistic detachment Porter finds a turning point in Pearson's career where his humanistic interests gave way to statistical ones in his Grammar of Science 1892 in which he attempted to establish scientific method as the moral educational basis for a refashioned culture In this original and engaging book a leading historian of modern science investigates the interior experience of one man's scientific life while placing it in a rich tapestry of social political and intellectual movements

errors lurking in quantitative statements regarding social and economic matters which may be addressed to them as voters or as critics of public policies E A Walker 1890 reprinted in Noether 1989 It has been more than a century since Walker stated his wish but progress has been slow just as advancement in the establishment of statistical principles and methodology has been laborious and difficult over the centuries We have tried to describe the milestones in this development and how each generation of scientists built on the heritage and foundations laid by their predecessors Many historians dismiss the great man theory which alleges that giant leaps of human knowledge are made by great thinkers who transcend the boundaries of their times great scientists don't leap outside their time but somewhere else in their own time Hevly 1990 We found this to be the case in the history of statistics Even the innovative writings of Karl Pearson and Sir Ronald Fisher that became the foundation of modern mathematical statistics were the outcome of two centuries of antecedent ideas and information
