Neuronal Calcium Sensors in Health and Disease Karl-Wilhelm Koch, Jose R. Naranjo, Beat Schwaller, Daniele Dell'Orco, Michael R. Kreutz, 2020-01-16 *The Role of Mitochondria, Oxidative Stress and Altered Calcium Homeostasis in Amyotrophic Lateral Sclerosis: From Current Developments in the Laboratory to Clinical Treatments* Manoj Kumar Jaiswal, 2017-04-17

Amyotrophic lateral sclerosis ALS is a rapidly progressive devastating and fatal disease characterized by selective loss of upper and lower motor neurons of the cerebral cortex brainstem spinal cord and muscle atrophy In spite of many years of research the pathogenesis of ALS is still not well understood ALS is a multifaceted genetic disease in which genetic susceptibility to motor neuron death interacts with environmental factors and there is still no cure for this deleterious disease At present there is only one FDA approved drug Riluzole which according to past studies only modestly slows the progression of the disease and improves survival by up to three months The suffering of the ALS patients and their families is enormous and the economic burden is colossal There is therefore a pressing need for new therapies Different molecular pathways and pathological mechanisms have been implicated in ALS According to past studies altered calcium homeostasis abnormal mitochondrial function protein misfolding axonal transport defects excessive production of extracellular superoxide radicals glutamate mediated excitotoxicity inflammatory events and activation of oxidative stress pathways within the mitochondria and endoplasmic reticulum can act as major contributor that eventually leads to loss of connection between muscle and nerve ultimately resulting to ALS However the detailed molecular and cellular pathophysiological mechanisms and origin and temporal progression of the disease still remained elusive Ongoing research and future advances will likely advance our improve understanding about various involved pathological mechanism ultimately leading to discoveries of new therapeutic cures Importantly clinical biomarkers of disease onset and progression are thus also urgently needed to support the development of the new therapeutic agents and novel preventive and curative strategies Effective translation from pre clinical to clinical studies will further require extensive knowledge regarding drug activity bioavailability and efficacy in both the pre clinical and clinical setting and proof of biological activity in the target tissue During the last decades the development of new therapeutic molecules advance neuroimaging tools patient derived induced stem cells and new precision medicine approaches to study ALS has significantly improved our understanding of disease In particular new genetic tools neuroimaging methods cellular probes biomarker study and molecular techniques that achieve high spatiotemporal resolution have revealed new details about the disease onset and its progression In our effort to provide the interested reader clinician and researchers a comprehensive summaries and new findings in this field of ALS research hereby we have created this electronic book which comprises of twenty seven chapters having various reviews perspective and original research articles All these chapters and articles in this book not only summarize the cutting edge techniques approaches cell and animal models to study ALS but also provide unprecedented coverage of the current developments and

new hypothesis emerging in ALS research Some examples are novel genetic and cell culture based models mitochondria mediated therapy oxidative stress and ROS mechanism development of stem cells and mechanism based therapies as well as novel biomarkers for designing and testing effective therapeutic strategies that can benefit ALS patients who are at the earlier stages in the disease I am extremely grateful to all the contributors to this book and want to thank them for their phenomenal efforts Manoj Kumar Jaiswal Ph D February 5 2017 New York NY **FCC Record** United States. Pathological Conditions, volume II Roberto Esposito,Filippo Cieri,Nicoletta Cera,Fernando Barbosa,2023-02-27

Biomarkers of Alzheimer's Disease: The Present and the Future Sylvain Lehmann,Charlotte Elisabeth Teunissen,2016-11-10 Alzheimer disease AD is a neurodegenerative disorder characterized by significant cognitive deficits behavioral changes sleep disorders and loss of functional autonomy AD represents the main cause of dementia and has become a major public health issue In addition the number of patients suffering from AD is growing rapidly as the population ages worldwide Memory impairment is usually the earliest clinical and core symptom of this disease The diagnosis at a late clinical stage is relatively easy However a delay in the diagnosis is damageable for the handling of patients in terms of optimal medical and social care The actual interest of the scientific head ways is to optimize the diagnosis in prodromal stage of the disease and to propose personalized therapeutic solutions to individual patients New revised AD diagnostic criteria include early alteration of cerebrospinal fluid CSF biomarkers decrease of amyloid peptides A β 42 and increase in tau and phosphorylated tau p tau protein concentration This recognition of CSF biological biomarkers for the diagnosis of AD is a major step towards the molecular diagnosis and follow up of the disease Many issues are however still subject of debate This book provides a comprehensive overview of the state of the art of fluid biomarkers for AD e g which novel biomarkers should be implemented in clinical practice for diagnosis or for monitoring treatment or side effects which ones are new for

AD or related dementias or what is the potential of peripheral blood markers Moreover the e Book provides practical guidelines how to optimally and efficiently develop and validate novel biomarker assays and to document and control pre analytical variation **The Alzheimer's Disease Challenge** Athanasios Alexiou, Mohammad A. Kamal, Ghulam Md Ashraf, 2019-12-04 Alzheimer's disease is undoubtedly the major health challenge of our Century with significant social and economic consequences This Frontiers eBook offers a contribution of 39 innovative papers on the multidimensional and crucial problem of Alzheimer's disease management and treatment Several perspectives research updates and trials describing methods on potential diagnosis and treatment are presented including biological mechanisms biomarkers and risk factors for an early and efficient prognosis diagnosis and prevention Additionally while the rapidly increasing Alzheimer's disease population demands holistic solutions and clinical studies with new therapeutic target approaches several of the contributive papers present promising drugs targeting Alzheimer's disease treatment We give our deepest acknowledgment to all the authors for their important and innovative contributions to the reviewers for their valuable recommendations on improving the submitting studies and all the Frontiers Editorial team for continuous support **Federal Register**, 2013-03

Green Nanoremediation Fernanda Maria Policarpo Tonelli, Arpita Roy, H C Ananda Murthy, 2023-06-22 This book focuses on green nanoremediation addressing aspects related to the use of nanomaterials generated through green synthesis protocols to efficiently restore polluted environs Nanomaterials characteristics such as large surface area capacity to easily reach into contaminated sites good reactivity and possibility of being developed to present photocatalytic activity and or to deal with targeted substances by chemical surface modification are useful specially to perform remediation As an alternative to conventional physicochemical methods the green based synthesis protocols reject the use of harmful reagents prevent waste production apply renewable energy source and or materials and consider in first place offering the smallest negative impact possible to living beings and to the ecosystem Green synthesis in nanotechnology field involves the use of seaweeds bacteria cyanobacteria yeasts fungi plants living ones biomass extracts and or bio derived products to generate the nanomaterials The introductory chapter will be dedicated to nanomaterials characteristics that enable them to be used in environmental remediation The first part of the book will be dedicated to organic and inorganic pollution and the threats they pose to living forms advantages disadvantages and mechanisms of nanoremediation comparison between conventional strategies of environmental pollution remediation and the green nanoremediation carbon based and non carbon based green nanomaterials capable of promoting environs remediation cost benefits of using nanomaterials and nanoinformatics to a safe nanotechnology The second part will be dedicated to green nanoremediation of water and soil microbe based algae based and plant based synthesis of nanomaterials to nanoremediation This part will also contain chapters dedicated to relevant nanomaterials for green nanoremediation protocols nano phytoremediation strategies strategies to evaluate the efficiency of protocols related to this kind of remediation main interactions of green nanomaterials and microbes during nanoremediation

and as a consequence of its biocompatibility of green nanomaterials This book's main purpose is to offer readers extensive knowledge on green nanoremediation as a feasible strategy to fight pollution's harmful consequences and clean environmental pollution but also present the challenges that should be surpassed

Facing the Other: Novel Theories and Methods in Face Perception Research Davide Rivolta, Aina Puce, Mark A Williams, 2016-04-08 We rely heavily on faces during social interactions Humans possess the ability to recognise thousands of people very quickly and accurately without effort The serious social difficulties that follow abnormalities of the face recognition system i.e. prosopagnosia strongly underline the importance of typical face skills in our everyday life Over the last fifty years research on prosopagnosia along with research in the healthy population has provided insights into the cognitive and neural features behind typical face recognition This has also been achieved thanks to non-invasive neuroimaging techniques such as functional Magnetic Resonance Imaging fMRI Electroencephalography EEG Magnetoencephalography MEG Diffusion Tensor Imaging DTI and Transcranial Magnetic Stimulation TMS However there is still much debate about the cognitive and neural mechanisms of face perception In the current Research Topic we plan to gather experimental works opinions commentaries mini reviews and reviews that focus on new or novel theories and methods in face perception research Where is the field at the moment Do we need to re-think the experimental procedures we have adopted so far Again what kind of techniques or combination of them and analysis methods will be important in the future From the experimental point of view we encourage both behavioural and neuroimaging contributions e.g. fMRI EEG MEG DTI and TMS Despite the main emphasis on face

perception memory and identification we will also consider original works that focus on other aspects of face processing such as expression recognition attractiveness judgments and face imagery In addition animal investigations and experimental manipulations that alter face recognition abilities in typical human subjects e g hypnosis are also welcome Overall we are proposing a Research Topic that looks at face processing using different perspectives and welcome contributions from different domains such as psychology neurology neuroscience cognitive science and philosophy The current Research Topic evolved over the desire to acknowledge the relatively recent loss of three giants in the field Drs Shlomo Bentin Truett Allison and Andy Calder We dedicate this Research Topic to them and their pioneering studies

Cooperative and Work-Integrated Education in Asia Yasushi Tanaka, Karsten Zegwaard, 2018-09-28 It has been over a century since Cooperative System of Education a work study programme for higher education was initiated by Herman Schneider at University of Cincinnati in the United States Today it is known as Cooperative Education which is commonly included within the umbrella term of Work Integrated Learning and broadly referred to by the World Association of Cooperative Education WACE as Cooperative and Work Integrated Education CWIE Its development worldwide has been closely related to the socioeconomic background of the region This book offers the first attempt to focus on the development of CWIE in Asia To date the development of CWIE in the Asia region has been slow compared to their counterparts The analysis follows international comparisons of China Japan Korea Hong Kong Vietnam Thailand Malaysia and Singapore on their educational history vocational education CWIE and future issues Although the level of development varies among them there is no doubt that this region as a whole is experiencing a rapidly growing global demographic and economic prominence CWIE can and to some extent already does play an important supportive role as part of growth The book goes on to conclude that in order to enable further successful expansion of CWIE and improve its best practice it is imperative to establish national and regional associations for CWIE as well as establish collaborative research activities across the region with governmental funding support

Using Genomics, Metagenomics and Other "Omics" to Assess Valuable Microbial Ecosystem Services and Novel Biotechnological Applications Diana Elizabeth Marco, Florence Abram, 2019-05-15 Most ecosystem services and goods human populations use and consume are provided by microbial populations and communities Indeed numerous provisioning services e g food and enzymes for industrial processes regulating services e g water quality contamination alleviation and biological processes such as plant microbial symbioses and supporting services e g nutrient cycling agricultural production and biodiversity are mediated by microbes The fast development of metagenomics and other meta omics technologies is expanding our understanding of microbial diversity ecology evolution and functioning This enhanced knowledge directly translates into the emergence of new applications in an unlimited variety of areas across all microbial ecosystem services and goods The varied topics addressed in this Research Topic include the development of innovative industrial processes the discovery of novel natural products the advancement of new agricultural methods the amelioration of

negative effects of productive or natural microbiological processes as well as food security and human health and archeological conservation The articles compiled provide an updated high quality overview of current work in the field This body of research makes a valuable contribution to the understanding of microbial ecosystem services and expands the horizon for finding and developing new and more efficient biotechnological applications
