Two students observe water flowing from left to right through the section of pipe shown above, which decreases in diameter and increases in elevation. The pipe ends on the right, where the water exits vertically. At point A the water is known to have a speed of 0.50 m/s and a pressure of $2.0 \times 10^5 \text{ Pa}$. The density of water is 1000 kg/m^3 .

- (a) The students disagree about the water pressure and speed at point B. They make the following claims.
- Student Y claims that the pressure at point B is greater than that at point A because the water is moving faster at point B.
- Student Z claims the speed of the water is less at point B than that at point A because by conservation of energy, some of the water's kinetic energy has been converted to potential energy of the Earth-water system.
- Indicate any aspects of student Y's claim that are correct.
 - Indicate any aspects of student Y's claim that are incorrect. Support your answer using appropriate physics principles.
 - Indicate any aspects of student Z's claim that are correct.
 - Indicate any aspects of student Z's claim that are incorrect. Support your answer using appropriate physics principles.
