(Jong Hyuk) Park, Young-Sik Jeong, Sang Oh Park, Hsing-Chung Chen, 2012-08-31 The 7th International Conference on Embedded and Multimedia Computing EMC 12 will be held in Gwangju Korea on September 6-8, 2012. EMC 12 will be the most comprehensive conference focused on the various aspects of advances in Embedded and Multimedia EM Computing. EMC 12 will provide an opportunity for academic and industry professionals to discuss the latest issues and progress in the area of EM. In addition, the conference will publish high quality papers which are closely related to the various theories and practical applications in EM. Furthermore, we expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject. The EMC 12 is the next event in a series of highly successful International Conference on Embedded and Multimedia Computing previously held as EMC 2011 China Aug 2011, EMC 2010 Philippines Aug 2010, EM Com 2009 Korea Dec 2009, UMC 08 Australia Oct 2008, ESO 08 China Dec 2008, UMS 08 Korea April 2008, UMS 07 Singapore Jan 2007, ESO 07 Taiwan Dec 2007, ESO 06 Korea Aug 2006.

High Performance Embedded Computing Handbook David R. Martinez, Robert A. Bond, M. Michael Vai, 2018-10-03 Over the past several decades, applications permeated by advances in digital signal processing have undergone unprecedented growth in capabilities. The editors and authors of High Performance Embedded Computing Handbook: A Systems Perspective have been significant contributors to this field, and the principles and techniques presented in the handbook are reinforced by examples drawn from their work. The chapters cover system components found in today's HPEC systems by addressing design trade-offs, implementation options, and techniques of the trade, then solidifying the concepts with specific HPEC system examples. This approach provides a more valuable learning tool. Because readers learn about these subject areas through factual implementation cases drawn from the contributing authors' own experiences, discussions include key subsystems and components, computational characteristics of high performance embedded algorithms and applications, front-end real-time processor technologies such as analog-to-digital conversion, application-specific integrated circuits, field-programmable gate arrays, and intellectual property-based design. Programmable HPEC systems technology including interconnection fabrics, parallel and distributed processing, performance metrics, and software architecture and automatic code parallelization and optimization. Examples of complex HPEC systems representative of actual prototype developments. Application examples including radar, communications, electro-optical, and sonar applications. The handbook is organized around a canonical framework that helps readers navigate through the chapters, and it concludes with a discussion of future trends in HPEC systems. The material is covered at a level suitable for practicing engineers and HPEC computational practitioners and is easily adaptable to their own implementation requirements.
