Alphard User Manual:

Alphard: Form and Content Mary Shaw, 2012-12-06 Alphard is a design for a programming system that supports the abstraction and verification techniques required by modern programming methodology. During the language design process we were concerned simultaneously with problems of methodology correctness and efficiency. Methodological concerns are addressed through facilities for defining new task specific abstractions that capture complex notions in terms of their intended properties without explicating them in terms of specific low level implementations. Techniques for verifying certain properties of these programs address the correctness concerns. Finally the language has been designed to permit compilation to efficient object code. Although a compiler was not implemented the research shed light on specification issues and on programming methodology. An abstraction specifying its behavior Alphard language constructs allow a programmer to isolate publicly while localizing knowledge about its implementation. The verification of such an abstraction consists of showing that its implementation behaves in accordance with the public specification. Given such a verification the abstraction may be used with confidence to construct higher level more abstract programs. The most common kind of abstraction in Alphard corresponds to what is now called an abstract data type. An abstract data type comprises a set of values for elements of the type and a set of operations on those values. A new language construct the form provides a way to encapsulate the definitions of data structures and operations in such a way that only public information could be accessed by the rest of the program.

The workshop was held in Halifax Nova Scotia Canada from July 23 through July 27 1989. This document reports the activities observations recommendations and conclusions resulting from FM89.

- 1 Purpose of Workshop The primary purpose for holding FM89 was to assess the role of formal methods in the development and fielding of trustworthy critical systems. The need for this assessment was predicated upon four observations:
- 1 Critical systems are increasingly being controlled by computer systems
- 2 Existing techniques for developing assuring and certifying computer based critical systems are inadequate
- 3 Formal methods have the potential for playing the same role in the development of computer based systems as applied mathematics does for other engineering disciplines and
- 4 Formal methods have had limited impact on the development of computer based systems and supporting technologies.

The goal of the workshop was to complete the following tasks:

- 1 Assess the problems

retarding the development of trustworthy critical systems 2 Determine the potential impact of applying formal methods techniques to the development of trustworthy critical systems 3 Determine the research and development required to facilitate a broader application of formal methods techniques 4

The Programming and Proof System ATES Armand Puccetti, 2013-11-11 Today people use a large number of systems ranging in complexity from washing machines to international airline reservation systems Computers are used in nearly all such systems accuracy and security are becoming increasingly essential The design of such computer systems should make use of development methods as systematic as those used in other engineering disciplines A systematic development method must provide a way of writing specifications which are both precise and concise it must also supply a way of relating design to specification A concise specification can be achieved by restricting attention to what a system has to do all considerations of implementation details are postponed With computer systems this is done by 1 building an abstract model of the system operations being specified by pre and post conditions 2 defining languages by mapping program texts onto some collection of objects modelizing the concepts of the system to be dealt with whose meaning is understood 3 defining complex data objects in terms of abstractions known from mathematics This last topic the use of abstract data types pervades all work on specifications and is necessary in order to apply ideas to systems of significant complexity The use of mathematics based notations is the best way to achieve precision

1 1 ABSTRACT DATA TYPES PROOF TECHNIQUES From a practical point of view a solution to these three problems consists to introduce abstract data types in the programming languages and to consider formal proof methods

Object Oriented Computer Systems Engineering Derrick Morris, David Evans, Peter Green, Colin Theaker, 2012-12-06 This book addresses issues concerning the engineering of system products that make use of computing technology These systems may be products in their own right for example a computer or they may be the computerised control systems inside larger products such as factory automation systems transportation systems and vehicles and personal appliances such as portable telephones In using the term engineering the authors have in mind a development process that operates in an integrated sequence of steps employing defined techniques that have some scientific basis Furthermore we expect the operation of the stages to be subject to controls and standards that result in a product fit for its intended purpose both in the hands of its users and as a business venture Thus the process must take account of a wide range of requirements relating to function cost size reliability and so on It is more difficult to define the meaning of computing technology These days this involves much more than computers and software For example many tasks that might be performed by software running in a general purpose computer can also be performed directly by the basic technology used to construct a computer namely digital hardware However hardware need not always be digital we live in an analogue world hence analogue signals appear on the boundaries of our systems and it can sometimes be advantageous to allow them to penetrate further
