LAB: Topographic Features and Advance/Retreat of Alpine Glaciers

Background:

The map in this lab shows three glaciers in the Juneau Ice Field in Alaska. It shows the Taku Glacier, one of the largest glaciers in the ice field as well as the smaller Norris, and Hole-in-the-Wall Glaciers. The topographic map includes land contours, glacial contours, and the positions of the margin of each glacier at different times since 1890.

Glaciers gain and lose snow and ice each year. The amount of snow and ice added to a

glacier is called *accumulation* and amount lost due to melting is called *ablation*. This relationship is called the glacial budget.

In this lab, you are going to analyze the topographic map to determine glacial features, such as U-shaped valleys, sharp mountain peaks, and moraines, as well as the dimensions of the glaciers. The map was made in 1980, and includes positions of the terminus (ice margin) during different times since 1890. Where are the glaciers now, in 2013? By determining the rate of advance or retreat, we can predict where the glacier will be in the future. Of course, this may depend on the rate not changing over time.

Make a prediction as to where you think the glaciers are now, and then write a conclusion after you analyze your data and review Google map images of the Taku Glacier Region.

Hypothesis: _____

PART 1: Topographic Map Analysis
