both the engineer investigating the of a device in a system and the engineer looking for new ways to explore behaviour the possibilities offered by emerging devices Many authors have contributed to this book There are two main reasons for this in photonic device research modelling First the book addresses two broad fields and measurements for which a vast knowledge exists in many research groups that was not integrated in a book before Second a significant number of laboratories decided to closely co operate in order to gain additional information on merits and drawbacks of their own methods for simulation and experimentation of devices as compared to the methods used by their colleagues in other laboratories The outcome are new aspects and approaches that would not have been investigated in the absence of a framework for a co operative programme

Isogeometric analysis and hierarchical refinement for multi-field contact problems Dittmann, Maik, 2017-03-20 The present work deals with multi field contact problems in the context of IGA In particular a thermomechanical as well as a fracture mechanical system is considered where novel formulations are introduced for both The corresponding discrete contact formulations are based on a variationally consistent mortar approach adapted for NURBS discretized and hierarchical refined surfaces Finally the capabilities of the proposed framework are demonstrated within numerous numerical examples

Nuclear Science Abstracts ,1976-02 *Nonlocal Modeling, Analysis, and Computation* Qiang Du, 2019-03-20 Studies of complexity singularity and anomaly using nonlocal continuum models are steadily gaining popularity This monograph provides an introduction to basic analytical computational and modeling issues and to some of the latest developments in these areas Nonlocal Modeling Analysis and Computation includes motivational examples of nonlocal models basic building blocks of nonlocal vector calculus elements of theory for well posedness and nonlocal spaces connections to and coupling with local models convergence and compatibility of numerical approximations and various applications such as nonlocal dynamics of anomalous diffusion and nonlocal peridynamic models of elasticity and fracture mechanics A particular focus is on nonlocal systems with a finite range of interaction to illustrate their connection to local partial differential equations and fractional PDEs These models are designed to represent nonlocal interactions explicitly and to remain valid for complex systems involving possible singular solutions and they have the potential to be alternatives for as well as bridges to existing models The author discusses ongoing studies of nonlocal models to encourage the discovery of new mathematical theory for nonlocal continuum models and offer new perspectives on traditional models analytical techniques and algorithms

Metal Forming Analysis R. H. Wagoner, J.-L. Chenot, 2001-05-07 The introduction of numerical methods particularly finite element FE analysis represents a significant advance in metal forming operations Numerical methods are used increasingly to optimize product design and deal with problems in metal forging rolling and extrusion processes Metal Forming Analysis first published in 2001 describes the most important numerical techniques for simulating metal forming operations The first part of the book describes principles and procedures and includes numerous examples and worked problems The remaining chapters focus on applications of numerical analysis to specific forming

operations Most of these results are drawn from the authors research in the areas of metal testing sheet metal forming forging extrusion and similar operations Sufficient information is presented so that readers can understand the nonlinear finite element method as applied to forming problems without a prior background in structural finite element analysis Graduate students researchers and practising engineers will welcome this thorough reference to state of the art numerical methods used in metal forming analysis
