HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure of the human body and its parts.

Physiology

The study of the function of the human body and its parts.

Structural levels

Studying the human body at the cellular, tissue, organ, and system levels.

- 1. **Cellular level** - study of the structure and function of cells.
- 2. **Tissue level** - study of the structure and function of tissues.
- 3. **Organ level** - study of the structure and function of organs.
- 4. **System level** - study of the structure and function of systems.
- 5. **Whole body level** - study of the structure and function of the whole body.

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body.

Organization of human body

The human body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the structure and function of chemical substances.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of systems.

6. **Whole body level** - study of the structure and function of the whole body.

The **axoplasm** is the cytoplasm of the neuron. It contains organelles such as mitochondria, Golgi apparatus, and endoplasmic reticulum.

Neurons

Neurons are the basic units of the nervous system.

They are specialized for the transmission of electrical signals.

Neurons are composed of a cell body and an axon.

NERVOUS SYSTEM

Functions

The nervous system controls and coordinates the activities of the body.

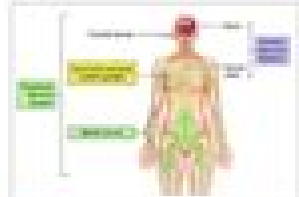

It receives information from the environment and the body.

It processes this information and sends out instructions.

It controls the body's response to these instructions.

It maintains the body's internal balance.

It regulates the body's metabolism.

Structure

The nervous system is composed of the brain, spinal cord, and nerves.

The brain is the control center of the nervous system.

The spinal cord is the main pathway for information between the brain and the rest of the body.

Nerves are bundles of axons that carry information between the brain, spinal cord, and the rest of the body.

CELLS OF NEURONS

Neurons are the basic units of the nervous system.

They are specialized for the transmission of electrical signals.

Neurons are composed of a cell body and an axon.

The cell body contains the nucleus and other organelles.

The axon is a long projection that carries electrical signals.

The axon terminal is the end of the axon where the signal is transmitted.

Types of neurons

There are three main types of neurons: sensory, motor, and interneurons.

Sensory neurons carry information from the senses to the brain.

Motor neurons carry information from the brain to the muscles.

Interneurons are found in the brain and spinal cord.

They connect sensory neurons to motor neurons.

They also control the body's internal balance.

They regulate the body's metabolism.

They maintain the body's internal balance.

They regulate the body's metabolism.

They maintain the body's internal balance.

They regulate the body's metabolism.

They maintain the body's internal balance.

They regulate the body's metabolism.

They maintain the body's internal balance.

They regulate the body's metabolism.

They maintain the body's internal balance.

They regulate the body's metabolism.

ORGAN SYSTEMS OF THE BODY

The human body is composed of several organ systems.

These systems work together to maintain the body's internal balance.

The organ systems are: digestive, respiratory, circulatory, excretory, reproductive, and nervous.

The digestive system breaks down food into nutrients.

The respiratory system takes in oxygen and releases carbon dioxide.

The circulatory system transports blood throughout the body.

The excretory system removes waste from the body.

The reproductive system produces offspring.

The nervous system controls and coordinates the activities of the body.

INTERNAL SYSTEM

The internal system is the part of the body that is inside the body.

It includes the digestive, respiratory, circulatory, excretory, reproductive, and nervous systems.

The digestive system breaks down food into nutrients.

The respiratory system takes in oxygen and releases carbon dioxide.

The circulatory system transports blood throughout the body.

The excretory system removes waste from the body.

The reproductive system produces offspring.

The nervous system controls and coordinates the activities of the body.
