there has been a resurgence of interest in the developing skeleton and the second edition of *Developmental Juvenile Osteology* incorporates much of the key literature that has been published in the intervening time. The main core of the text persists by describing each individual component of the human skeleton from its embryological origin through to its final adult form. This systematic approach has been shown to assist the processes of both identification and age estimation and acts as a core source for the basic understanding of normal human skeletal development. In addition to this core, new sections have been added where there have been significant advances in the field. Identifies every component of the juvenile skeleton by providing a detailed analysis of development and ageing and a detailed description of each bone in four ways: adult bone, early development, ossification, and practical notes. New chapters and updated sections covering the dentition, age estimation in the living, and bone histology. An updated bibliography documenting the research literature that has contributed to the field over the past 15 years since the publication of the first edition. Heavily illustrated including new additions. *Searching for Adam* Terry Mortenson, 2016-10-26. You can believe with great intellectual integrity what the Bible says about Adam and the origin and history of man. Though there are a growing number of books out on Adam, this one is unique with its multi-author combination of biblical, historical, theological, scientific, archaeological, and ethical arguments in support of believing in a literal Adam and the Fall. A growing number of professing evangelical leaders and scholars are doubting or denying a literal Adam and a literal Fall, which thereby undermines the gospel of Jesus Christ, the Last Adam, who came to undo the damaging consequences of Adam's sin and restore us to a right relationship with our Creator. This book is to increase your confidence in the truth of Genesis 1:11 and the gospel. Enhance your understanding pertaining to the biblical evidence for taking Genesis as literal history. Discover the scientific evidence from genetics, fossils, and human anatomy for the Bible's teaching about Adam. Understand the moral, spiritual, and gospel reasons why belief in a literal Adam and Fall are essential for Christian orthodoxy. *Visuospatial Processing for Education in Health and Natural Sciences* Juan C. Castro-Alonso, 2019-08-05. Visuospatial processing is key to learn and perform professionally in the domains of health and natural sciences. As such, there is accumulating research showing the importance of visuospatial processing for education in diverse health sciences, e.g., medicine, anatomy, surgery, and in many natural sciences, e.g., biology, chemistry, physics, geology. In general, visuospatial processing is treated separately as a spatial ability and as working memory with visuospatial stimuli. This book attempts to link these two research perspectives and present visuospatial processing as the cognitive activity of two components of working memory: mostly the visuospatial sketch pad and also the central executive, which allows to perform in both spatial ability and working memory tasks. Focusing on university education in the fields of health sciences and natural sciences, the chapters in this book describe the abilities of mental rotation, mental folding, spatial working memory, visual working memory, among others, and how different variables affect them. Some of these variables thoroughly addressed in the book are sex, gender, visualizations, interactivity, cognitive load, and embodiment. The book concludes with a chapter presenting VAR, a battery of

computer based tests to measure different tasks entailing visuospatial processing With contributions by top educational psychologists from around the globe this book will be of interest to a broad array of readers across the disciplines

Modern Humans John F. Hoffecker,2017-10-31

Modern Humans is a vivid account of the most recent and perhaps the most important phase of human evolution the appearance of anatomically modern people Homo sapiens in Africa less than half a million years ago and their later spread throughout the world Leaving no stone unturned John F Hoffecker demonstrates that Homo sapiens represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non genetic information Modern Humans synthesizes recent findings from genetics including the rapidly growing body of ancient DNA the human fossil record and archaeology relating to the African origin and global dispersal of anatomically modern people Hoffecker places humans in the broad context of the evolution of life emphasizing the critical role of genetic and non genetic forms of information in living systems as well as how changes in the storage transmission and translation of information underlie major transitions in evolution He also draws on information and complexity theory to explain the emergence of Homo sapiens in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia including the Arctic and Beringia beginning between 75 000 and 60 000 years ago
