

A Course Material on  
**Automobile Engineering**

**Author Page**

At first I like to submit my sincere thanks to GOD, PARENTS and FRIENDS who have helped and encouraged me to prepare this entire course material for the subject of Automobile Engineering.

Automobile Engineering is a vast field encompassing different types of vehicles used for transportation of people and materials. It is very difficult to cover all the aspects of automobile engineering in single notes, because vehicles are being refined and improved day by day. However an attempt is made in this course material to give the maximum possible details of fundamentals of the automobile vehicles.

It is always challenging to decide whether historical notes should come before or after the description and interpretation of the state of the art. Arguing for the second alternative is the fact that readers should already have understood the motivations that drive a design decision.

We begin this chapter with basis of automobile, and through by the transmissions and steering systems, going on later to describe wheels, tires and braking & suspension systems. This emphasis is solely due to the larger impact that suspensions and steering systems have on vehicle architecture and its consequent evolution; steering systems will be described together with suspensions because these two systems are indissoluble from the point of view of designers.

intelligence and machine learning      The Alumni Quarterly and Fortnightly Notes ,1919      *The Socialist Car* Lewis H. Siegelbaum,2013-04-18 Across the Soviet Bloc from the 1960s until the collapse of communism the automobile exemplified the tension between the ideological imperatives of political authorities and the aspirations of ordinary citizens For the latter the automobile was the ticket to personal freedom and a piece of the imagined consumer paradise of the West For the authorities the personal car was a private mobile space that challenged the most basic assumptions of the collectivity The socialist car and the car culture that built up around it was the result of an always unstable compromise between official ideology available resources and the desires of an increasingly restless citizenry In *The Socialist Car* eleven scholars from Europe and North America explore in vivid detail the interface between the motorcar and the state socialist countries of Eastern Europe including the USSR In addition to the metal glass upholstery and plastic from which the Ladas Dacias Trabants and other still extant but aging models were fabricated the socialist car embodied East Europeans longings and compromises hopes and disappointments The socialist car represented both aspirations of overcoming the technological gap between the capitalist first and socialist second worlds and dreams of enhancing personal mobility and status Certain features of automobility shortages and privileges waiting lists and lack of readily available credit the inadequacy of streets and highways prevailed across the Soviet Bloc In this collective history the authors put aside both ridicule and nostalgia in the interest of trying to understand the socialist car in its own context
