The book begins with the four basic principles of toxicology: dose matters, people differ, everything transforms, and timing is crucial. The contributors discuss various agents of toxicity, including foodborne solvents, crop protection chemicals, radiation, and plant and animal toxins. They examine various methods for defining and measuring toxicity in a host of areas, including genetics, carcinogenicity, toxicity in major body systems, and the environment. This new edition contains an expanded glossary reflecting significant changes in the field. New topics in this edition include the importance of dose response, systems toxicology, food safety, the humane use and care of animals, neurotoxicology. The comprehensive coverage and clear writing style make this volume an invaluable text for students and a one-stop reference for professionals.
