

Closing Ceremony Speech - SGS MUN 2019

We were all here this weekend to represent our countries, push ourselves in debate, and pass good resolutions. But although our success in these things is important to us, I would like to take a few minutes to talk about, not success, but failure.

Having participated in our discussions, we should remember that there is no such thing as an overnight success; it's a fallacy, a myth pedalled in a world where someone may be virally catapulted to fame as an internet phenomenon in a matter of 24 hours. What I would like us to dwell on as this weekend is drawing to a close, is the work, the process that takes us towards success, towards our goals. That process sometimes includes failure. Not winning an award, but focusing on learning and improving.

There was once a lady in a market place, she saw Picasso and asked him for a self-portrait. He agreed...and drew a perfect picture in 30 seconds. He then handed it back to her and asked for \$30,000. She questioned how it could cost that much when it only took him 30 seconds. He replied, "It took me 30 years to be able draw that in 30 seconds".

It's amazing how - so often - the time taken to achieve success is forgotten; how frequently we forget what lies beyond the tip of the iceberg, the shadowy section underneath the water. But that part, the part we don't see, the part full of failure, learning and progress, is absolutely what makes success possible. If we have experienced that success today, it is because we have invested time, valued experience and learned from our mistakes and failures.

When you look at the definition of failure in the dictionary, it is defined by three words: lack of success. If we fear failure and imperfection, it ultimately means that we don't value growth and learning, it means we don't value experience and struggle, and our obsession with winning means that we're actually letting go of what we could be learning at every single point. So I hope that this weekend you have been brave and courageous in your discussions, have not be afraid to express your views. To those of you who did not win awards today, keep trying. There are always more conferences to get involved in. Learn from your mistakes, whether it is improving your public speaking skills, spending more time researching issues or gaining confidence in the committee room. Being open to improvement is important.

Stuttering Joseph S. Kalinowski,Tim Saltuklaroglu,2005-11 This textbook presents a new paradigm for understanding the nature and treatment of stuttering

based on recent discoveries in neuroscience The authors illustrate how visible stuttering manifestations are actually a solution to a central problem acting as a compensatory mechanism for a central involuntary block rather than a problem in themselves This book features methods that reduce stuttering by inhibiting this central block through the use of sensory and motor tools notably mirror neurons and shows readers that stuttering is not a condition that can be effortlessly trained out of the system or eliminated via simple speech retraining

Spatial-Hearing Ability Differ among Listeners? What Is the Role of Learning and Multisensory Interactions?

Guillaume Andéol,Brian D. Simpson,Ewan A. Macpherson,2016-08-29 Spatial hearing ability has been found to vary widely across listeners A survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e g acoustical characteristics related to sound localization cues perceptual factors e g sensory cognitive processing perceptual learning multisensory interactions and methodological factors e g differences in stimulus presentation methods across studies However the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals with normal hearing or within special populations e g hearing impaired listeners remains largely unknown Likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research A better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have numerous benefits In particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or

multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational aids for the visually impaired For this Research Topic we have considered manuscripts that present new methods or review existing methods for the study of inter individual differences present new data or review existing data concerning acoustical features relevant for explaining inter individual differences in sound localization performance present new or review existing psychophysical or neurophysiological findings concerning spatial hearing and or auditory perceptual learning and or multisensory interactions in humans normal or impaired young or older listeners or other species discuss the influence of inter individual differences on the design and use of assistive listening devices rehabilitation or human machine interfaces involving spatial hearing or multimodal perception of space ergonomy
