Deeper Learning, Dialogic Learning, and Critical Thinking Emmanuel Manalo,2019-09-12 Deeper learning dialogic learning and critical thinking are essential capabilities in the 21st century environments we now operate Apart from being important in themselves they are also crucial in enabling the acquisition of many other 21st century skills capabilities such as problem solving collaborative learning innovation information and media

literacy and so on. However, the majority of teachers in schools and instructors in higher education are inadequately prepared for the task of promoting deeper learning, dialogic learning, and critical thinking in their students. This is despite the fact that there are educational researchers who are developing and evaluating strategies for such promotion. The problem is bridging the gap between the educational researchers' work and what gets conveyed to teachers and instructors as evidence-based, usable strategies. This book addresses that gap in it, leading scholars from around the world describe strategies they have developed for successfully cultivating students' capabilities for deeper learning and transfer of what they learn, dialogic learning, and effective communication and critical thought. They explore connections in the promotion of these capabilities and they provide in accessible form research evidence demonstrating the efficacy of the strategies. They also discuss answers to the questions of how and why the strategies work. A seminal resource, this book creates tangible links between innovative educational research and classroom teaching practices to address the all-important question of how we can realize our ideals for education in the 21st century. It is a must-read for pre-service and in-service teachers, teacher educators, and professional developers and educational researchers who truly care that we deliver education that will prepare and serve students for life.

Data Without Labels Vaibhav Verdhhan, 2025-07-08. Discover all practical implementations of the key algorithms and models for handling unlabeled data. Full of case studies demonstrating how to apply each technique to real-world problems. In *Models and Algorithms for Unsupervised Learning*, you'll learn fundamental building blocks and concepts of machine learning and unsupervised learning. Data cleaning for structured and unstructured data like text and images. Unsupervised time series clustering. Gaussian Mixture models and statistical methods. Building neural networks such as GANs and autoencoders. How to interpret the results of unsupervised learning. Choosing the right algorithm for your problem. Deploying unsupervised learning to production. Business use cases for machine learning and unsupervised learning. *Models and Algorithms for Unsupervised Learning* introduces mathematical techniques, key algorithms, and Python implementations that will help you build machine learning models for unannotated data. You'll discover hands-off and unsupervised machine learning approaches that can still untangle raw real-world datasets and support sound strategic decisions for your business. Don't get bogged down in theory; the book bridges the gap between complex math and practical Python implementations covering end-to-end model development all the way through to production deployment. *Models and Algorithms for Unsupervised Learning* teaches you to apply a full spectrum of machine learning algorithms to raw data. You'll master everything from k-means and hierarchical clustering to advanced neural networks like GANs and Restricted Boltzmann Machines. You'll learn the business use case for different models and master best practices for structured text and image data. Each new algorithm is introduced with a case study for retail, aviation, banking, and more, and you'll develop a Python solution to fix each of these real-world problems. At the end of each chapter, you'll find quizzes, practice datasets, and links to research papers to help you lock in what you've learned and expand your knowledge.
