

When "Differential-Lock" is selected on the switch, power is removed from the electrical solenoid allowing the solenoid plunger to retract. Spring tension moves the shift fork back into place and engages the engagement dog to the side gear that is part of the planetary differential assembly. This locks the rear differential as a solid rear axle, increasing traction.

Transmission Removal

1. Place vehicle on a level surface and block the front wheels.
2. Elevate the rear of the vehicle and safely support the vehicle under the rear frame area.

CAUTION

Serious injury may result if machine tips or falls. Be sure machine is secure before beginning this procedure. Always wear eye protection.

3. Remove the wheel nuts and washers from both rear wheels. Remove the rear wheels and set them off to the side.
4. If internal transmission repair is required, drain the transmission lubricant.
5. Remove the seat and side storage container to access the PVT system.
6. Disconnect the brake switch harness located below the outer PVT cover.
7. Using a 3/8" socket, extension and ratchet, remove the (9) screws retaining the outer PVT cover. Remove the cover from the vehicle.
