The State of Food Security and Nutrition in the World 2018 Food and Agriculture Organization of the United Nations, 2018-09-14 New evidence this year corroborates the rise in world hunger observed in this report last year sending a warning that more action is needed if we aspire to end world hunger and malnutrition in all its forms by 2030. Updated estimates show the number of people who suffer from hunger has been growing over the past three years returning to prevailing levels from almost a decade ago. Although progress continues to be made in reducing child stunting over 22 percent of children under five years of age are still affected. Other forms of malnutrition are also growing: adult obesity continues to increase in countries irrespective of their income levels and many countries are coping with multiple forms of malnutrition at the same time: overweight and obesity as well as anaemia in women and child stunting and wasting.

Creating an Ecological Society Fred Magdoff, Chris Williams, 2017-05-29 Aiming squarely at replacing capitalism with an ecologically sound and socially just society, Magdoff and Williams provide accounts of how a new world can be created from the ashes of the old. They show that it is possible to envision and create a society that is genuinely democratic, equitable and ecologically sustainable. And possible not one moment too soon for society to change fundamentally and be brought into harmony with nature. From publisher description.

L'État de la sécurité alimentaire et de la nutrition dans le monde 2018 Food and Agriculture Organization of the United Nations, United Nations International Children's Emergency Fund, World Health Organization, World Food Programme, International Fund for Agriculture Development, 2018-09-12 Cette année de nouveaux éléments viennent confirmer la progression de la faim dans le monde. Le constat est dans la édition de 2017. Nous devons donc agir si nous espérons libérer le monde de la faim et de la malnutrition sous toutes ses formes d'ici 2030. D'après les estimations actualisées, le nombre de personnes souffrant de la faim augmente depuis

trois ans et est en train de revenir au niveau où il se situait il y a presque 10 ans Le taux de retard de croissance chez les enfants continue de diminuer mais est toujours de plus de 22 pour cent chez les enfants de moins de cinq ans D'autres manifestations de la malnutrition sont en augmentation L'obésité des adultes poursuit sa hausse quel que soit le niveau de revenu des pays et de nombreux pays doivent faire face simultanément plusieurs formes de malnutrition obésité et excès pondéral anémie chez les femmes et maciété et retard de croissance chez les enfants Le rapport de 2017 a montré que les progrès de la lutte contre la faim dans le monde étaient entravés par l'exacerbation des conflits et de la violence dans différentes régions du monde On constatait aussi que dans certains pays les données initiales donnaient à penser que les phénomènes liés au climat avaient des répercussions sur la sécurité alimentaire et la nutrition L'édition de 2018 va plus loin Elle montre que la variabilité du climat et les extrêmes climatiques même en l'absence de conflit sont des facteurs clés de la récente progression de la faim dans le monde et l'une des principales causes de crises alimentaires graves et de leurs impacts sur la nutrition et la santé La variabilité du climat et l'exposition des phénomènes climatiques plus complexes plus fréquents et plus intenses menacent de rogner les acquis en matière de lutte contre la faim et la malnutrition voire d'inverser la tendance On constate aussi que la faim est beaucoup plus présente dans les pays dont le système agricole est très sensible aux précipitations la température et aux sécheresses graves et dont une part importante de la population tire ses revenus de l'agriculture Le présent rapport fait le point des nouveaux défis qu'il faudra relever pour éliminer la faim l'insécurité alimentaire et la malnutrition sous toutes ses formes Il est urgent d'accelérer et de porter une plus grande attention à l'action pour le climat afin de renforcer la résilience et la capacité d'adaptation des populations et de leurs moyens d'existence face à la variabilité du climat et aux extrêmes climatiques Ces considérations et d'autres conclusions sont détaillées dans L'état de la sécurité alimentaire et de la nutrition dans le monde 2018
