Introduction to Stokes Structures Claude Sabbah,2012-10-03 This research monograph provides a geometric description of holonomic differential systems in one or more variables Stokes matrices form the extended monodromy data for a linear differential equation of one complex variable near an irregular singular point The present volume presents the approach in terms of Stokes filtrations For linear differential equations on a Riemann surface it also develops the related notion of a Stokes perverse sheaf This point of view is generalized to holonomic systems of linear differential equations in the complex domain and a general Riemann Hilbert correspondence is proved for vector bundles with meromorphic connections on a complex manifold Applications to the distributions solutions to such systems are also

discussed and various operations on Stokes filtered local systems are analyzed Homological Algebra S.I. Gelfand, Yu.I. Manin, 2013-12-01 This book the first printing of which was published as volume 38 of the Encyclopaedia of Mathematical Sciences presents a modern approach to homological algebra based on the systematic use of the terminology and ideas of derived categories and derived functors The book contains applications of homological algebra to the theory of sheaves on topological spaces to Hodge theory and to the theory of modules over rings of algebraic differential operators algebraic D modules The authors Gelfand and Manin explain all the main ideas of the theory of derived categories Both authors are well known researchers and the second Manin is famous for his work in algebraic geometry and mathematical physics The book is an excellent reference for graduate students and researchers in mathematics and also for physicists who use methods from algebraic geometry and algebraic topology **ENC Focus** ,2001
