find a complex and expansive history of anatomy in the pages of women's poetry. Women poets have long been absent from histories of literature and science but by shifting our focus from content to form Sperrazza reveals complex engagements with questions on corpse preservation, dissection, obstetrics and gynecology and skin theory in the poetry of Margaret Cavendish, Aemilia Lanyer, Mary Wroth, Mary Sidney Herbert and Hester Pulter. Through close formal analysis and original research on early modern anatomy treatises *Anatomical Forms* weaves together critical conversations in poetics, book history, the history of science and women's writing. Sperrazza challenges her readers to imagine science differently to understand that science might not always look like we expect it to look and in the process brings into focus a feminist history of poetic form centered on material practice.
