Algebra Transformations More Than Meets The Eye:

Practical Linear Algebra for Data Science Mike X Cohen, 2022-09-06 If you want to work in any computational or technical field you need to understand linear algebra As the study of matrices and operations acting upon them linear algebra is the mathematical basis of nearly all algorithms and analyses implemented in computers But the way it is presented in decades old textbooks is much different from how professionals use linear algebra today to solve real world modern applications This practical guide from Mike X Cohen teaches the core concepts of linear algebra as implemented in Python including how they are used in data science machine learning deep learning computational simulations and biomedical data processing applications Armed with knowledge from this book you will be able to understand implement and adapt myriad modern analysis methods and algorithms Ideal for practitioners and students using computer technology and algorithms this book introduces you to The interpretations and applications of vectors and matrices Matrix arithmetic various multiplications and transformations Independence rank and inverses Important decompositions used in applied linear algebra including LU and QR Eigendecomposition and singular value decomposition Applications including least squares model fitting and principal components analysis

Faith Movements and Social Transformation Samta P. Pandya, 2018-12-11 This book examines the role of Hindu inspired faith movements HIFMs in contemporary India as actors in social transformation It further situates these movements in the context of the global political economy where such movements cross national boundaries to locate believers among the Hindu diaspora and others In contemporary neoliberal India HIFMs have become important actors and they realize themselves by making public assertions through service The four pillars of the contemporary presence of such movements are gurus sociality hegemony and social transformation Gurus who spearhead these movements create a matrix of possible meanings in their public discourses which their followers pick up to create messages of personal and social change Sociality is a core strategy of proliferation across such movements and implies social service which is qualified by memories of the guru and what they are believed to embody Hegemony is reflected in the fact that social service in such movements often ominously imbibes right wing or far right Hinduism They propose a model of Hindu inspired social transformation involving faith building into and transforming the civil society The book discusses in a nuanced way several Hindu inspired faith movements of various hues which have made national and international impact This topical book is of interest to students and researchers in the fields of sociology anthropology social work and social psychology with a special interest in the study of religious movements

Transformation Methods For Nonlinear Partial Differential Equations Dominic G B Edelen, Jian-hua Wang, 1992-06-09 The purpose of the book is to provide research workers in applied mathematics physics and engineering with practical geometric methods for solving systems of nonlinear partial differential equations The first two chapters provide an introduction to the more or less classical results of Lie dealing with symmetries and similarity solutions The results however are presented in the context of contact manifolds

rather than the usual jet bundle formulation and provide a number of new conclusions The remaining three chapters present essentially new methods of solution that are based on recent publications of the authors The text contains numerous fully worked examples so that the reader can fully appreciate the power and scope of the new methods In effect the problem of solving systems of nonlinear partial differential equations is reduced to the problem of solving families of autonomous ordinary differential equations This allows the graphs of solutions of the system of partial differential equations to be realized as certain leaves of a foliation of an appropriately defined contact manifold In fact it is often possible to obtain families of solutions whose graphs foliate an open subset of the contact manifold These ideas are extended in the final chapter by developing the theory of transformations that map a foliation of a contact manifold onto a foliation This analysis gives rise to results of surprising depth and practical significance In particular an extended Hamilton Jacobi method for solving systems of partial differential equations is obtained
