Simple And Systematic The Basic Concepts Have Been Clearly Explained And Their Functions Are Adequately Highlighted A Few Recent Developments Have Also Been Included To Provide A Contemporary Understanding Of The Subject Animal Cell Biotechnology Raymond Spier,J. B. Griffiths,1985 The Animal Cell Biotechnology series provides an in depth state of the art coverage of a field which has developed into a multi billion dollar industry over the last ten years Written by leading experts each volume contains well referenced fully indexed reviews on practical and theoretical aspects of a specific subject including Bioreactor design and development Cell products and their development Downstream processing Product testing The main theme of this volume applications of animal cells has been broadened from the recurring theme of production of biologicals to the cells themselves as a product and cells as a pharmacological toxicological assay system The need to replace animals in research and for the testing of drugs foods and cosmetics is becoming increasingly critical as society has succeeded in making this a high profile ethical issue It is the perceived belief that the best chance of reducing the use of animals will be to develop suitable assays based on cells in culture Two chapters in this volume cover replacement animal cells and the use of skin cells for in vitro testing Other chapters also detail the cell products tPA Factor VIII and Growth Factors The basic tool is of course the cell and the text contains chapters on how to standardize the cell and process in order to achieve reproducible conditions whether for production or assay purposes Also featured is a review of immortalization techniques that can be used to construct new cell lines which fulfill the specialized criteria required of them Finally a chapter on surface active agents is included *Animal Cell Technology* R. E. Spier,J. B. Griffiths,C. Animal Cell Culture Mohamed Al-Rubeai, 2014-11-28 Animal cells are the preferred cell factories for the production of complex molecules and antibodies for use as prophylactics therapeutics or diagnostics Animal cells are required for the correct post translational processing including glycosylation of biopharmaceutical protein products They are used for the production of viral vectors for gene therapy Major targets for this therapy include cancer HIV arthritis cardiovascular and CNS diseases and cystic fibrosis Animal cells are used as in vitro substrates in pharmacological and toxicological studies This book is designed to serve as a comprehensive review of animal cell culture covering the current status of both research and applications For the student or R D scientist or new researcher the protocols are central to the performance of cell culture work yet a broad understanding is essential for translation of laboratory findings into the industrial production Within the broad scope of the book each topic is reviewed authoritatively by experts in the field to produce state of the art collection of current research A major reference volume on cell culture research and how it impacts on production of biopharmaceutical proteins worldwide the book is essential reading for everyone working in cell culture and is a recommended volume for all biotechnology libraries

Animal Cell Technology Asok Mukhopadhyay, 2008-11-27 Animal

cell technology has made tremendous progress in human healthcare. With the advent of recombinant DNA and hybridization technology, it is now possible to manufacture many complex therapeutic proteins using animal cells which otherwise could not be produced or isolated from natural sources. Another form of products where cells are directly involved is regenerative medicine and tissue engineering. Hence, the future of healthcare relies on the progress on these new endeavors of animal cell technology. Broadly divided in four sections and sixteen chapters, this book is meant for the diverse background of students starting from the basic biology to the bioengineering discipline. Since animal cell technology commands proper understanding of cell biology, DNA technology, immunology, and bioengineering, the goal of this book is to amalgamate knowledge from these fields and pass on to the readers who intend to start professional carrier in academic or in industrial research. An animal cell is a unique factory where thousands of genes are encoded and transcribed, products are translated, and finally processed to biologically active molecules. It is therefore important to understand inside of a cell how cellular functions are coordinated, limitations of cells, reasons for proliferation and cellular death. The very first section of the book deals with the basic biological aspects to understand cell and how it functions. The second section offers basic cell culture technology among the readers. This section covers preservation of animal cells, cell culture medium, culture environment, good manufacturing practices, and equipment, quantitative analysis, etc. In the third section, recombinant therapeutic proteins, large scale cell culture, and scale up processes are discussed. The fourth section provides glimpses of the advanced studies where therapeutic applications of cells and tissues have been discussed. Embryonic and somatic stem cells, cloning, tissue engineering are the main subjects of this section. Finally, in the concluding section, the future perspective of animal cell culture technology has been discussed.
