Illustrating Mathematics Diana Davis, 2020-10-16 This book is for anyone who wishes to illustrate their mathematical ideas which in our experience means everyone It is organized by material rather than by subject area and purposefully emphasizes the process of creating things including discussions of failures that occurred along the way As a result the reader can learn from the experiences of those who came before and will be inspired to create their own illustrations Topics illustrated within include prime numbers fractals the Klein bottle Borromean rings tilings space filling curves knot theory billiards complex dynamics algebraic surfaces groups and prime ideals the Riemann zeta function quadratic fields hyperbolic space and hyperbolic 3 manifolds Everyone who opens this book should find a type of mathematics with which they identify Each contributor explains the mathematics behind their illustration at an accessible level so that all readers can appreciate the beauty of both the object itself and the mathematics behind it Modeling and Simulation in Science and Mathematics Education

Wallace Feurzeig, Nancy Roberts, 2012-12-06 The world consists of many complex systems ranging from our own bodies to ecosystems to economic systems Despite their diversity complex systems have many structural and functional features in common that can be effectively simulated using powerful user friendly software As a result virtually anyone can explore the nature of complex systems and their dynamical behavior under a range of assumptions and conditions This ability to model dynamic systems is already having a powerful influence on teaching and studying complexity The books in this series will promote this revolution in systems thinking by integrating skills of numeracy and techniques of dynamic modeling into a variety of disciplines The unifying theme across the series will be the power and simplicity of the model building process and all books are designed to engage the reader in developing their own models for exploration of the dynamics of systems that are of interest to them Modeling Dynamic Systems does not endorse any particular modeling paradigm or software Rather the volumes in the series will emphasize simplicity of learning expressive power and the speed of execution as priorities that will facilitate deeper system understanding **Common Core Mathematics Standards and**
