Epidemiological Report on Communicable Diseases in Europe 2009, 2009 This third edition of the Annual Epidemiological Report on Communicable Diseases in Europe provides a comprehensive summary of surveillance data in 2007 and the threats monitored in 2008 The data presented show that the major threats to the health of European citizens from infectious diseases have not changed substantially since ECDC began its work in 2005 It confirms the importance of the five areas initially identified as priorities for ECDC's activities namely respiratory tract infections in particular influenza and tuberculosis HIV infection vaccine preventable diseases in particular pneumococcal infections healthcare associated infections and antimicrobial resistance This year the Annual Report gives special attention to vaccine preventable diseases and immunisation programmes in the European Union EU and European Economic Area EEA countries Vaccination has been an increasingly effective weapon in the fight against infectious diseases since their first development in the 19th century The worldwide elimination of smallpox is a good example and a well known success story Indeed vaccination has been so effective that in most European countries the incidence of formerly common childhood diseases such as measles and rubella is low and their detrimental effects are extremely rare This has been achieved through continuous high levels of vaccination coverage and the resulting high immunity in the population needs to be maintained However it can be said that vaccination has in some respects become victim of its success because many Europeans no longer perceive the threat from a number of vaccine preventable diseases and therefore might opt not to get vaccinated or to vaccinate their children The figures in the report show however that suboptimal vaccine coverage allows these diseases with their serious consequences to return All of the seven deaths from measles that were recorded in Europe in 2006 and 2007 were in people who had not been vaccinated Since the publication of ECDC's first Annual Epidemiological Report in 2007 the quality of the data is improving year on year allowing increasingly meaningful analyses of the European situation For the 2009 report the process of data collection and validation was greatly facilitated by the full use of the online The European Surveillance System TESSy by the Member States ECDC is confident that with the commitment and collective efforts by all the remaining discrepancies and comparability issues with the data will continue to progressively decrease over the coming years Page iii *Annual Epidemiological Report Reporting on 2009 Surveillance Data and 2010 Epidemic Intelligence Data* Graham
