Sustainable Composites for Automotive Engineering Vijay Raghunathan, Sanjay Mavinkere Rangappa, Vinod Ayyappan, Suchart Siengchin, 2025-09-01 Sustainable Composites for Automotive Engineering presents recent trends in this important research field Emphasis is placed on the development characterization and application of lightweight composites in various automobile components The types of materials covered include polymer composites metal matrix and ceramic matrix composites The book takes a 360 degree approach and covers all aspects of the product development cycle including materials selection as well as design and development processes testing characterization modelling and simulation and applications The book will be a valuable reference resource for academic and industrial researchers materials scientists and engineers industrial R D automotive engineers and manufacturers working in the design and development of composite materials for applications in automotive components Provides in depth knowledge about the materials their properties and performance and applications in automotive components Covers polymer matrix composites ceramic matrix and metal based composites Discusses traditional manufacturing methods and recent developments in sustainable green manufacturing and testing of automobile parts with various industrial case studies Includes brake friction materials as well as natural and rubber based composites Covers OEM regulations environmental aspects economic analysis and life cycle assessment of composite based products Indian Emission Norms and Practices Mr P. Vignesh, Dr. A.R. Pradeep Kumar, Dr. N. Shankar Ganesh, In India vehicle emission standards were implemented in 1991 for gasoline vehicles and in 1992 for diesel vehicles Since 2000 Euro standards have been followed in India under the name Bharat Stage Emission Standards for four wheeled vehicles Since October 2010 Bharat Stage III norms have been implemented throughout India Bharat Stage IV norms have been in effect in a few cities since April 2010 Bharat Stage IV is expected to be implemented throughout India by April 2017

It is already in use in 13 major cities Upgrading the emission standards necessitates the upgrading of manufacturing companies technology which raises the cost of the vehicle One of the main reasons for the slow upgrade of emission standards is cost However there are some who argue that the cost increase is offset by cost savings in health care because the pollutants that cause disease are reduced as emission standards are raised Fuels are also important in meeting these emission standards Fuel specifications have also been aligned with the corresponding European production norms
