Performance Tensegrity-Inspired Metamaterials and Structures Anna Al Sabouni-Zawadzka, 2022-11-09 Following current trends toward development of novel materials and structures this volume explores the concept of high performance metamaterials and metastructures with extremal mechanical properties inspired by tensegrity systems The idea of extremal materials is applied here to cellular tensegrity lattices of various scales Tensegrity systems have numerous advantages they are lightweight have a high stiffness to mass ratio are prone to structural control can be applied in smart and adaptive systems and exhibit unusual mechanical properties This study is focused on tensegrity lattices whose inner architecture resembles that of cellular metamaterials but which are aimed at civil engineering applications in non material scales It proposes a methodology for investigation of extremal mechanical properties of such systems based on discrete and continuum approaches including the discussion on scale effects It proves that similarly to tensegrity based metamaterials tensegrity metastructures are able to exhibit extremal mechanical behaviour This book is directed to researchers and scientists working on metamaterials and tensegrity systems developing energy absorption solutions for building and transport industry The findings described in this monograph can also be useful in other fields of applied sciences such as civil engineering robotics and material science Advanced Field-Effect Transistors Dharmendra Singh Yadav, Shiromani Balmukund Rahi, Sukeshni Tirkey, 2023-12-22 Advanced Field Effect Transistors Theory and Applications offers a fresh perspective on the design and analysis of advanced field effect transistor FET devices and their applications The text emphasizes both fundamental and new paradigms that are essential for upcoming advancement in the field of transistors beyond complementary metal oxide semiconductors CMOS This book uses lucid intuitive language to gradually increase the comprehension of readers about the key concepts of FETs including their theory and applications In order to improve readers learning opportunities Advanced Field Effect Transistors Theory and Applications presents a wide range of crucial topics Design and challenges in tunneling FETs Various modeling approaches for FETs Study of organic thin film transistors Biosensing applications of FETs Implementation of memory and logic gates with FETs The advent of low power semiconductor devices and related implications for upcoming technology nodes provide valuable insight into low power devices and their applicability in wireless biosensing and circuit aspects As a result researchers are constantly looking for new semiconductor devices to meet consumer demand This book gives more details about all aspects of the low power

technology including ongoing and prospective circumstances with fundamentals of FET devices as well as sophisticated low power applications *Advances in Rapid Thermal and Integrated Processing* F. Roozeboom, 2013-03-09 Rapid thermal and integrated processing is an emerging single wafer technology in ULSI semiconductor manufacturing electrical engineering applied physics and materials science Here the physics and engineering of this technology are discussed at the graduate level Three interrelated areas are covered First the thermophysics of photon induced annealing of semiconductor and related materials including fundamental pyrometry and emissivity issues the modelling of reactor designs and processes and their relation to temperature uniformity Second process integration treating the advances in basic equipment design scale up integrated cluster tool equipment including wafer cleaning and integrated processing Third the deposition and processing of thin epitaxial dielectric and metal films covering selective deposition and epitaxy integrated processing of layer stacks and new areas of potential application such as the processing of III V semiconductor structures and thin film head processing for high density magnetic data storage *Chinese Industrial Espionage* William C. Hannas, James Mulvenon, Anna B. Puglisi, 2013-06-14 This new book is the first full account inside or outside government of China's efforts to acquire foreign technology Based on primary sources and meticulously researched the book lays bare China's efforts to prosper technologically through others achievements For decades China has operated an elaborate system to spot foreign technologies acquire them by all conceivable means and convert them into weapons and competitive goods without compensating the owners The director of the US National Security Agency recently called it the greatest transfer of wealth in history Written by two of America's leading government analysts and an expert on Chinese cyber networks this book describes these transfer processes comprehensively and in detail providing the breadth and depth missing in other works Drawing upon previously unexploited Chinese language sources the authors begin by placing the new research within historical context before examining the People's Republic of China's policy support for economic espionage clandestine technology transfers theft through cyberspace and its impact on the future of the US This book will be of much interest to students of Chinese politics Asian security studies US defence US foreign policy and IR in general **Performance-Driven Surrogate Modeling of High-Frequency Structures** Slawomir Koziel, Anna Pietrenko-Dabrowska, 2020-02-19 This book discusses surrogate modeling of high frequency structures including antenna and microwave components The focus is on constrained or performance driven surrogates The presented techniques aim at addressing the limitations of conventional modeling methods pertinent to the issues of dimensionality and parameter ranges that need to be covered by the surrogate to ensure its design utility Within performance driven methodologies mitigation of these problems is achieved through appropriate confinement of the model domain focused on the regions promising from the point of view of the relevant design objectives This enables the construction of reliable surrogates at a fraction of cost required by conventional methods and to accomplish the modeling tasks where other techniques routinely fail The book provides a broad selection of specific

frameworks extensively illustrated using examples of real world microwave and antenna structures along with numerous design examples Furthermore the book contains introductory material on data driven and physics based surrogates The book will be useful for the readers working in the area of high frequency electronics including microwave engineering antenna design microwave photonics magnetism especially those that utilize electromagnetic EM simulation models in their daily routines Covers performance driven and constrained modeling methods not available in other books to date Discusses of a wide range of practical case studies including a variety of microwave and antenna structures Includes design applications of the presented modeling frameworks including single and multi objective parametric optimization

Neural Nets and Surroundings Bruno Apolloni, Simone Bassis, Anna Esposito, Francesco Carlo Morabito, 2012-12-25 This volume collects a selection of contributions which has been presented at the 22nd Italian Workshop on Neural Networks the yearly meeting of the Italian Society for Neural Networks SIREN The conference was held in Italy Vietri sul Mare Salerno during May 17 19 2012 The annual meeting of SIREN is sponsored by International Neural Network Society INNS European Neural Network Society ENNS and IEEE Computational Intelligence Society CIS The book as well as the workshop is organized in three main components two special sessions and a group of regular sessions featuring different aspects and point of views of artificial neural networks and natural intelligence also including applications of present compelling interest
