Air University Space Handbook Air:

Space Warfare John J. Klein, 2012-09-10 This new study considers military space strategy within the context of the land and naval strategies of the past Explaining why and how strategists note the similarities of space operations to those of the air and naval forces this book shows why many such strategies unintentionally lead to overemphasizing the importance of space based offensive weaponry and technology Counter to most U S Air Force doctrines the book argues that space based weapons don't imbue superiority It examines why both air and naval strategic frameworks actually fail to adequately capture the scope of real world issues regarding current space operations Yet by expanding a naval strategic framework to include maritime activities which includes the interaction of land and sea the breadth of issues and concerns regarding space activities and operations can be fully encompassed Commander John Klein United States Navy uses Sir Julian Corbett's maritime strategy as a strategic springboard while observing the salient lessons of other strategists including Sun Tzu Clausewitz Jomini and Mao Tse tung to show how a space strategy and associated principles of space warfare can be derived to predict concerns develop ideas and suggest policy not currently recognized This book will be of great interest to all students and scholars of military and strategic studies and to those with an interest in space strategy in particular

of Classes of United States Government Publications Available for Selection by Depository Libraries ,2006 *US Presidents and the Militarization of Space, 1946-1967* Sean N. Kalic, 2012-04-10 In the clash of ideologies represented by the Cold War even the heavens were not immune to militarization Satellites and space programs became critical elements among the national security objectives of both the United States and the Soviet Union According to US Presidents and the Militarization of Space 1946 1967 three American presidents in succession shared a fundamental objective of preserving space as a weapons free frontier for the benefit of all humanity Between 1953 and 1967 Presidents Eisenhower Kennedy and Johnson all saw nonaggressive military satellite development as well as the civilian space program as means to favorably shape the international community's opinion of the scientific technological and military capabilities of the United States Sean

N Kalic's reinterpretation of the development of US space policy based on documents declassified in the past decade demonstrates that a single vision for the appropriate uses of space characterized American strategies across parties and administrations during this period. Significantly, Kalic's findings contradict the popular opinion that the United States sought to weaponize space and calls into question the traditional interpretation of the space race as a simple action reaction paradigm. Indeed, beyond serving as a symbol and ambassador of US technological capability, its satellite program provided the United States with advanced nonaggressive military intelligence gathering platforms that proved critical in assessing the strategic nuclear balance between the United States and the Soviet Union. It also aided the three administrations in countering the Soviet Union's increasing international prestige after its series of space firsts beginning with the launch of Sputnik in 1957.
