Air Crash Investigation: The Crash of Air France Flight 358 Hans Griffioen, 2009-06-21. On August 2, 2005, Air France Flight 358, an Airbus A340, departed Paris on a flight to Toronto, Canada, with 297 passengers and 12 crew members on board. On final approach, the aircraft's weather radar was displaying heavy precipitation encroaching on the runway from the northwest. The aircraft touched down 3800 feet down the runway and was not able to stop before the end of it. The aircraft stopped in a ravine and caught fire. All passengers and crew members were able to evacuate the aircraft on time. Only 2 crew members and 10 passengers were seriously injured during the crash and the evacuation.

AIR CRASH INVESTIGATIONS, LOST OVER THE ATLANTIC: The Crash of Air France Flight 447 THE FINAL REPORT George Cramoisi, editor, 2012-09-01. On 31 May 2009, the Airbus A330 flight AF 447 took off from Rio de Janeiro Galeão airport bound for Paris Charles de Gaulle. At around 2 h 02, the Captain left the cockpit for a short nap. At around 2 h 08, at flight level 350, the crew made a course change of 12 degrees to the left to avoid bad weather. At 2 h 10 min 05, likely following the obstruction of the Pitot probes by ice crystals, the speed indications were incorrect and some automatic systems disconnected. The aeroplane's flight path was not controlled by the two copilots. They were rejoined 1 minute 30 later by the Captain while the aeroplane was in a stall situation that lasted until the impact with the sea at 2 h 14 min 28 s, killing all 228 persons on board. It took almost two years to recover the wreck of the aircraft from a depth of 4 000 metres. The accident resulted from a succession of events such as inconsistency between the measured airspeeds, inappropriate control inputs and the crew's failure to diagnose the stall situation.

Aircraft System Safety Duane Kritzing, 2016-09-12. *Aircraft System Safety Assessments for Initial Airworthiness Certification* presents a practical guide for the novice safety practitioner in the more specific area of assessing aircraft system failures to show compliance to regulations such as FAR25.1302 and 1309. A case study and safety strategy beginning in chapter two shows the reader how to bring safety assessment together in a logical and efficient manner. Written to supplement, not replace, the content of the advisory material to these regulations, e.g. AMC25.1309 as well as the main supporting reference standards, e.g. SAE ARP 4761, RTCA DO 178, RTCA DO 154, this book strives to amalgamate all these different documents into a consolidated strategy with simple process maps to aid in their understanding and optimise their efficient use. Covers the effect of design, manufacturing and maintenance errors and the effects of common component errors. Evaluates the malfunctioning of multiple aircraft components and the interaction which various aircraft systems have on the ability of the aircraft to continue safe flight and landing. Presents and defines a case study, an aircraft modification program and a safety strategy in the second chapter, after which each of the following chapters will explore the theory of the

technique required and then apply the theory to the case study
