The Airbus A350-900

Members of the first Airbus A350-900 flight crew, including Airbus flight engineers, are seen in the cockpit of the first A350-900. The aircraft is shown in flight, with the Airbus logo and 'A350-900' visible on the tail.

Spirit AeroSystems actualizes Airbus' intelligent design for the A350's center fuselage and front wing spar in Kinston, N.C.

by Lauren Lippert

The Airbus A350-900 is the world's most advanced long-range, twin-engine, wide-body aircraft. It is the first aircraft to be certified for flight to the end of the year and to be completed by the fourth quarter of 2014, in time for the scheduled first flight. Assembly of the center fuselage and wing components is now underway. The forward and center sections will ship from the Airbus facility in Hamburg, Germany, and the rear fuselage will come from the Airbus plant in Toulouse, France. For each aircraft produced, the new final assembly line in Kinston will build the three sections of the fuselage already produced with

wing, horizontal stabilizer and rudder systems, such as an outboarder. The plant's wings will be assembled by Spirit AeroSystems, which is building the A350's center fuselage and front wing spar in Kinston, N.C. Fibre Metal Laminates Ad Vlot, Jan Willem Gunnink, 2001-11-30 Fibre metal laminates were developed at Delft University of Technology in The Netherlands from the beginning of the 1980s This is a new family of hybrid materials consisting of thin metal layers bonded together by fibres embedded in an adhesive As a result of this build up fibre metal laminates possess a mixture of the characteristics of both metals and composite materials Initial development led to the Arall variant using aramid fibres which was first applied on the C 17 military transport aircraft around 1990 Large scale application became possible with a variant using glass fibres dubbed Glare which was selected for the Airbus A380 super jumbo in 2001 This is the first book to discuss these new materials and it deals mostly with Glare It covers most of the relevant aspects of the materials from static mechanical properties fatigue and impact to design production and maintenance of aircraft structures This book contains the basic information on these new materials necessary for engineers and aircraft operators alike

Facing the Unexpected in Flight Jean Pinet, 2015-10-28 Airline pilots often have to face sudden unexpected situations that can become potentially dangerous They are trained to deal with these situations but sometimes the lack of time before the situation deteriorates and the associated stress can compromise their basic cognitive sequence and lead to a serious incident or even an accident This book identifies common denominators in pilots reactions to dangerous unexpected events and highlights behavior common to all in complex stressful situations Facing the Unexpected in Flight Human Limitations and Interaction with Technology attempts to clarify the human characteristics at play in stressful situations with the goal of providing a more solid basis for designing aeronautical operating equipment and shaping future automation The book applies an original cognitive analysis method to highlight actual operational behavior within a quick succession of short mental segments lasting less than one minute in all This rational method of assessing human potential should contribute to a more effective distribution of roles and help to optimize the pilot aircraft interface The current drive towards total automation together with the drone revolution and questions of cost effectiveness within a global economy raises the question of whether there is a need for pilots onboard aircraft So after scientifically dissecting human limitations and advantages in terms of flying an aircraft the book concludes with reflections by the author on the possibility and implications of eliminating pilots from aircraft In this section the author sets aside scientific rigor and provides his sometimes subjective personal opinions on the professional future of airline pilots
