Airport Planning Manual Airbus Com:

Guidebook for Air Cargo Facility Planning and Development Mike Maynard, 2015 The guidebook presents a broad discussion of the various issues that must be addressed in planning air cargo facilities. It describes tools and techniques for sizing facilities including data and updated metrics necessary to forecast future facility requirements as a function of changing market and economic conditions. The procedures offered support airport operators in crafting effective business plans and development decisions that meet the industry's current and future technological, operational, and security challenges in a cost-effective, efficient, and environmentally sensitive manner.

Air Navigation Law Ruwantissa Abeyaratne, 2012-03-14 The aviation community in which the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA), and the Civil Air Navigation Services Organization (CANSO) play leading roles is hard at work in bringing aviation into the 21st Century. In doing so, the United States and Europe have taken proactive steps forward in introducing modernization, particularly in moving towards more efficient air traffic management systems within NextGen and SESAR. Elsewhere, in the fields of personnel licensing, rules of the air, accident investigation, and aeronautical charts and information, significant strides are being made in moving from mere regulation to implementation and assistance calculated to make all ICAO member States self-sufficient in international civil aviation. However, these objectives can be achieved only if the aviation industry has a sustained understanding of the legal and regulatory principles applying to the various areas of air navigation. This book provides that discussion. Some of the subjects discussed in this book are sovereignty in airspace, flight information, and air defence identification zones, rules of the air, personnel licensing, meteorological services, operations of aircraft, air traffic services, accident and incident investigation, aerodromes, efficiency aspects of aviation, and environmental protection, aeronautical charts and information, the carriage of dangerous goods, and NextGen and SESAR. Except for NextGen and SESAR, these subjects form the titles of the Annexes to the Chicago Convention that particularly involve the rights and liabilities of the key players involved in air navigation.

WHO aircraft disinsection methods and procedures World Health Organization, 2023-11-23 This document describes the latest methods and procedures for disinsection of internal areas of passenger, military, and cargo aircraft to prevent international transport of mosquito vectors of human diseases and protect aircraft passengers and airline crew. It provides updates on insecticide application methods and equipment, physical requirements of aerosol and residual sprays, and revised calculation tables for aerosol spray amounts required, as well as updated examples of pre-embarkation and pre-departure cabin treatment and certification requirements of the International Civil Aviation Organization (ICAO). It is intended for use by Member States and stakeholders, e.g., airlines, airport authorities, members of the International Air Transport Association (IATA), pesticide manufacturers, and pesticide regulatory agencies. Countries that are in liaison with the departure country should observe the requirements for disinsection of arriving aircraft, taking into consideration various risk factors described in the document. The regulatory aspects of approval of products for

aircraft disinsection and occupational risk assessment are beyond the scope of the document Separate guidance is available for surveillance and control of vectors in and around airport premises Although the prevention of importation of agricultural pests is beyond the scope of this document many countries may require aircraft disinsection for this purpose

Law and Regulation of Aerodromes Dr. Ruwantissa Abeyratne, 2014-04-02 This book encapsulates in detail the principles pertaining to legal and regulatory aspects of aerodromes As the title denotes it discusses the various aspects of the structure and functioning of an aerodrome and the complexities involved It focuses on the law and regulation of aerodrome certification and planning aerodrome services financial and economic planning security management and governance The airport industry is one of the fastest growing within the aviation industry requiring innovation and creativity in management This in turn has called for an increased focus on advanced management programmes for airport managers and lawyers The Airport Management Professional Accreditation Programme AMPAP offered worldwide by the International Civil Aviation Organization and Airports Council International and the Angkasa Pura II Airport Management Excellence Programme of Indonesia are two such initiatives which give airport professionals a sound grounding on the principles and techniques of management and law
